

Epson WorkForce 840 printer

under four conditions: Printing (a five-page text document), idle (a few minutes after printing), standby (30 minutes after printing, allowing the printer to enter a power-saver mode) and 'off' (using the hard power switch if provided). Many inkjet models reduced their power consumption to less than a watt in soft-off mode. Power consumption in each mode was measured as a time-average to include short-term fluctuations or heater cycling (in the case of laser models.) All the three Canon printers were most energy-efficient among the brands tested. Power consumption of three Epson printers (Stylus Photo R2880, BX625FWD and Stylus PX820FWD) was highest.

Duplexing. Ten printers in this test can be set to print on both sides of a page automatically. Prints of the Dr

Grauert Letter were taken using the duplex feature. These prints were then compared with prints taken from the same printer while not using duplexing feature. With the HP and Epson models, print quality was the same with or without duplexing. On the Canon models, using the auto duplexing feature lowered the print quality by about one point.

Maintenance

Clean your printer's moving parts periodically with a soft dry cloth. Never force your way to remove jammed paper as it may damage printer. Never use a wet cloth for cleaning. Before cleaning your printer, disconnect it from the power source. Keep the printer free of excessive dust.

Wide-format printers. Six of the printers in this test were wide-format printers. Two of the six were also multifunction printers. The Brother MFC-5890CN can print up to A3-size paper but it can only scan, copy and fax up to A4-size paper. The HP Officejet 7500A can print up to A3+ and scan and copy up to A3. The other four wide-format printers were regular inkjets and can print up to A3+ size. The Canon Pro9000 Mark II and the Epson R2880 are primarily photo printers, each of which holds eight ink cartridges.

Look before you buy

Most people would be satisfied with the print quality from these printers.

The first choice to make is which type to buy: an inkjet or laser, an all-in-one or a regular printer. Decide what
