

Re³-inforced Isolation

The ultimate reinforced DC/DC firewall!

- ✓ Reinforced Isolation up to 10kVDC
- ✓ Ultracompact transformer with Re³-Inforced Technology
- ✓ Standard DIP24 and SIP7 case
- ✓ 20% extra power
- ✓ Efficiency up to 86%
- ✓ UL-, CSA-, EN 60601-certified
- ✓ Ideal for IGBT and Medical applications

RECOM has designed the first DC/DC converter in a DIP24 case that breaks the 10kV barrier! These new converters, the REC3.5 and REC6 families, offer 10kVDC (5kVAC) isolation using a revolutionary new transformer concept with Re³-Inforced Technology.

Although much smaller than conventional transformers this new concept features triple isolated transformer windings. With an extremely low leakage current, it is ideal for medical applications where the electronic circuit is in contact with the patient. These new reinforced isolated converters offer a 20% higher power rating compared to their predecessors and reach an 86% efficiency level. All converters feature permanent short circuit and overload protection and conform to UL, CSA, and EN 60601 specifications.

They are available with the two most common pin-outs and can optionally be delivered with under voltage feature and a remote pin.

Re³-inforced isolated converters are offering reliable safety concerning dV/dt.
