

MEMS devices to generate over \$6 billion by 2016

A report from Juniper Research expects the annual revenues generated by micro-electromechanical systems (MEMS) devices built into mobile phones including sensors, audio, displays and radio frequency (RF) devices to exceed \$6 billion by 2016. Acceleration in the mobile device market including smartphones, tablets, e-readers and ultrabooks is cited as the main reason for their growth.

The report identifies three different contributing categories to this opportunity for MEMS devices: those already deployed (accelerometers, magnetometers and gyroscopes); those currently in initial stages of deployment (displays, RF devices, pressure sensors and microphones); and future applications (such as joysticks, temperature and humidity sensors, speakers and pico-projectors).

Mobile communications revenue to rise double-digit in 2012

Fueled by the growth in the next-generation long-term evolution (LTE) 4G wireless technology, the overall market for mobile communications equipment is expected to see a double-digit expansion this year. Factory revenue for the mobile communications market is projected to reach \$398.0 billion—up 17 per cent from \$340.8 billion last year, according to an IHS iSuppli report.

According to the report, although growth this year is somewhat moderated from the brisk 32 per cent expansion of 2011, the market as a whole shows no signs of declining any time soon.

Mobile malware accelerating

Juniper Networks' 2011 *Mobile Threats Report* shows that mobile malware has

Promotions at National Instruments

National Instruments (NI) has promoted David Fuller to vice president of application and embedded software, Duncan Hudson to business and technology fellow and David Loadman to vice president of mobile device test.

Fuller will be responsible for delivering NI's vision of graphical system design through NI LabVIEW software, Hudson will guide the direction of product initiatives, architecture and technology and Loadman will be responsible for long-term strategies and product roadmaps for the mobile device test market.

Sony CEO resigns

Howard Stringer, president and chief executive officer of Sony, has resigned. He will be succeeded by Kazuo Hirai, who will take over in April. Stringer will become chairman of the board of directors in June.

Philips consumer lifestyle business gets new president

Philips has appointed Ada Ratnam as the president of its consumer lifestyle business in India. The current president is Anjan Bose, who is set to retire on March 31, 2012. Currently, Ratnam is the head of the lighting systems and controls business of Philips India.

Vodafone shuffles its top-level management

As part of changes in top-level management, Vodafone has created

In Focus

two new roles of chief operating officer (COO) and chief commercial officer. Sunil Sood, who is currently director-business operations for South and West, will now be the COO and Sanjoy Mukherjee, who is currently the director, business operations for North and West, will be the CEO.

Vodafone Group has also named Anajit Singh as the non-executive chairman of its India operations. Singh is the founder and chairman of Max India as well as its subsidiaries such as Max New York Life Insurance Company, Max Healthcare Institute and Max Bupa Health Insurance Company.

Xerox appoints managing director

Rajat Jain has been named managing director of Xerox India, the local operating company of Xerox Corporation. Jain will be responsible for leading Xerox India's strategy implementation and business operations, including sales of products and services, marketing, brand recognition, and customer service operations. He will focus on expanding Xerox' channel presence and further strengthening partner relationships across India.

Samsung appoints new CMO

Samsung India has appointed Rahul Saigal as the new chief marketing officer (CMO). Saigal worked with Unilever as a regional brand director in Thailand for two-and-a-half years (from 2005 onwards) and then served Aircel as a CMO.

reached a new stage of maturation.

According to the report, 2011 saw a record number of mobile malware attacks, particularly to the Google Android platform. Cyber criminals continued to hone their craft by finding new ways to exploit vulnerabilities and human behaviour for profit across all mobile platforms and devices.

The data also showed evolution

from sophisticated, complex and deep technical attacks to schemes that are lightweight, social and able to deliver fast profits.

Indian enterprise IT spending to grow 10.3 per cent in 2012

According to Gartner, Indian enterprise IT spending across all industry markets is forecast to surpass \$39 billion in 2012—a 10.3 per cent increase
