

Robotics

Robotics applies skills from different branches of engineering. Here are some websites for people interested in robots and robotics

Robotics Online

It is an online resource for industrial robotics. Robotics Online is sponsored by Robotic Industries Association (RIA)—the only trade group in North America organised specifically to serve the robotics industry. It provides information to help engineers, managers and executives apply and justify robotics and flexible automation. The site includes a buyer's guide section with a search engine function, plus featured articles, daily news updates, case studies, technical papers, event calendar, job openings, an Ask the Experts' forum, and much more.

<http://robots.net>

ROBOTS.NET

This site was launched in 2001 and runs on 100 per cent free software. It was created by R. Steven Rainwater, Roger Arrick and Jim Brown. All three are current or past members of the Dallas Personal Robotics Group (DPRG). The site has a section called 'robots.net Robomenu', where robot builders show their latest creations. There are around 450 robots listed under this section. Other sections on the site include Projects, Blogs and Podcast. There is also a list of awards that the site won for its content.

Society of Robots

The website was started by a Carnegie Mellon University alumni as a small hobbyist website complete with dozens of useful tutorials and a robot help forum. But now it has become much bigger, with hundreds of thousands of readers. It has different categories to give in-depth information on the skills and hardware like microcontrollers, sensors, actuators, batteries, electronics and mechanics used in a robot.

www.active-robots.com

Active Robots

This site was launched in 2002 and has grown dramatically year on year. Today, it is one of the leading suppliers and manufacturers of robotics and electronics. The site has over 2500 products to choose from including robotic kits, robotic parts and books and magazines related to the subject. It offers a product list that is regularly updated. Secure 24-hour online ordering, or ordering by phone, fax or post is available.

RobotShop

The site was founded in 2003 and its head office is located in Mirabel, Quebec. RobotShop is a source for domestic and professional robot technology. Here, you will find personal robots, professional robots, robot toys, robot kits and robot parts for building your own robots. If you are looking for robot pet care, robot floor cleaners, robot vacuums, robot pool cleaners or robot lawn mowers, to do your household chores, this is the site for you.
