

To The Cloud

The book addresses the what, why and how of enterprise cloud adoption. It lays out a four-step framework, leveraging the experience and best practices of Microsoft's own IT group. The book delivers end-to-end business and technology guidance, describing how to analyse application portfolios to identify good cloud candidates, choose the right cloud models, consider architecture and security, and understand how shifting operations to the cloud affects budgeting and staffing.

This practical resource debunks myths, revealing that real clouds are more than just Web hosting, virtualisation, or the Internet itself rebranded. The book is supported by clear frameworks, graphics, tables, summaries and checklists to provide a practitioner's guide to the cloud.

Mobile Ad Hoc Networking

This book is intended for developers, researchers and graduate students in computer science and electrical engineering, as well as researchers and developers in the telecommunications industry. It covers advanced research and development in mobile ad hoc networks. There are several interconnected chapters. Readers can find advances on a specific topic, as well as explore the field of rapidly emerging mobile ad hoc network.

The historical evolution and role of mobile ad hoc networks in 4G mobile systems are discussed in depth in first chapter. Most of the chapters do not focus on single-layer mechanism, rather discuss functions implemented by combining mechanisms that in a strict layered architecture belong to different layers.

Design Through Verilog HDL

This book is an attempt to address the issues of writing test benches, testing a design for all its desired functions, and identifying and removing faults. It discusses the constructs in Verilog through illustrative examples. The examples are tested with popular and commonly used simulation packages and the results reproduced.

There are total twelve chapters. Chapters 1 and 2 and brings out place and significance of Verilog in very-large-scale integration design and basics of the language, its convention, etc. Chapters 4 and 5 form introduction to design through Verilog. Chapter 6 is dedicated to design at the data flow level and chapters 7 and 8 discuss behavioural level design.

ELCOMOS Report

This report supported by the Department of Information Technology, is a result of a careful study of electronics components and related assemblies for various electronics hardware products in the country. The report assesses the market and production of electronic components as well as associated value chain in India.

The report will be helpful for all stakeholders including government, investors, component manufacturers, electronic manufacturing service providers and end-product manufacturers, who have a long-term interest in the industry.
