

## Master Electronics Through Self Learning Kits

If you want to go beyond theory and become a pro at electronics—here are a few self-learning kits that you should try your hands on. These kits are also a great resource for training institutes and engineering colleges.

### Arduino self-learning kit

Arduino is the latest buzz in the world of electronics. Everyone is talking about it. It's not only keen for its open standards but also for the simplicity involved in mastering it, and the innovative applications that engineers are building around it.

Here's an excellent self-learning kit that includes an Arduino Uno R3 Board (104), a prototyping shield, a USB cable, a mini breadboard, jumper wires (20), 6 LEDs, 1 7-segment red LED, 12 volt 1 amp power adapter, 1 sound sensor, 1 touch sensor, 4 mini push-button switches, and 5 flow components.

Self learning material includes CD containing tutorials and sample programs.

₹3490

### AVR self-learning kit

If you want to master the AVR micro-controller, then this is the kit for you. The development board comes with built-in interfacing with a 1627 Appanomics LCD, a stepper motor, a sensor (TSP Sensor) and a serial cable.

Self-learning material includes (i) Program CD (Containing application notes, software, and sample programs), (ii) Study material in the form of a booklet.

Plus, you get access to free online training (videos) and can get more assignments and even assessments done of your projects via online.

₹2990

### 8051 Self learning kit

8051 is taught in all engineering colleges. However, if you want to master this chip and try some hands-on projects, this is the kit for you. It's an excellent resource for those who want to master 8051 micro-controller. The development board comes with built-in interfacing with a 1627 Appanomics LCD, a stepper motor, a sensor (TSP Sensor) and a serial cable. Self-learning material includes (i) Program CD (Containing application notes, software, and sample programs), (ii) Study material in the form of a booklet.

Plus, you get access to free online training (videos) and can get more assignments and even assessments done of your projects via online.

₹2750

### 40 Do It Yourself Projects

For those who want to gain hands-on experience in building electronics projects, this is a great kit to start with. The kit comes with a book titled 'CHITALK' Hobby Projects, which provide you with 40 different DIY projects to work on.

Some of the interesting projects include anti-theft alarm, cordless FM radio, rechargeable white LED torch, 7 segment display clock, phone broadcaster, etc.

Besides the book, the kit comes with a range of components (40+) and a breadboard for trying out the DIY projects. Key components include: IC 555, touch sensor, light sensor (TSP2345), IC 4060, LM358, IC4011, IC4017, Sensor-RT11, IC40106.
