the IITs it was IIT Jodhpur which took up the challenge of making the low-cost tablet. He highlighted component availability, locating the right EMS facilities, logistics and supply chain management as some of the challenges faced by the institute while designing Aakash.

The Expo proved to be a delight both for the exhibitors and the visitors. The latter included the Who's Who of the industry. The mix of exhibitors was such that all kinds of visitors got something to suit their interests.

Commenting on the choice of the companies present at the Expo, Amin Ajmel, CEO, Sunrise Instruments, said, "I think the EFY Expo is great as it hosts names like Millennium Semiconductors. Such brands should be retained for years to come. But I would like to see more companies in automotive electronics."

Talking about the highlights of the show, Ajay Kaswani, partner, Emsons Radio Corporation, said, "The best part of the Expo is the ambience it provides. I also liked the overall presentation. I expect more Taiwanese companies to participate next year because this is one platform where Indian companies get to interact with foreign players."

Feedback from the exhibitors

A lot of serious business took place at the exposition. Here's what the exhibitors said about the responses they got at the event.

Rendy He, marketing director, Tayo Industrial Group (HK): "Our goal of participating in the Expo was

to promote our brand, find new customers and good distributors. We got a good response from new customers. And we succeeded in finding potential distributors as well."

N.Y. Patil, general manager, marketing, Kyoritsu Automation India: "Our objective for this show was to flash our new products, look for visibility and generate awareness about the latest technology. We are satisfied with the enquiries we have received. Compared to the first show, we feel this one has been far better and much more focused. We are also hopeful that EFY's third event will definitely surpass its current level and that's why we have already made a booking for the next show. In that, we plan to have a bigger booth and would also love to invite our foreign principals. This show, though small in size, had a focused audience and serious enquiries were generated—which is what every exhibitor looks for."

Shreedhar Kambhar, supplier business manager, element 14: "We are quite happy to exhibit in this show as we had the opportunity to meet some of our top clients in the industry. We wanted to run our special campaigns and we are happy we were able to do that. Also, the Buyer-Seller forum helped us immensely in identifying our target buyers. Being in the supply chain bracket, this event has offered us a platform to connect with our suppliers and expand our business horizons."

Yim Hoi To, manager, Golden Jade Electronics: "The Expo was a good experience. This was my second year at the EFY

Expo and I found this better than other shows in India. I will certainly recommend this exhibition to my friends and ask them to participate in the coming years. EFY is a 43-year-old organisation. Since it carries such wonderful credibility, the show is sure to become a leader in the coming years. It already leads the rest in terms of quality and the number of visitors."

Georg Jadelhauser, director, Sales, Asia, Micronas: "The first objective was to be known to the Indian market and as such, we had a really good time here. We met many customers, engineers and decision-makers. The event proved to be really beneficial for us. Welcoming students for a full day is very good idea. It is quite similar to expos held in Germany where Friday means 'Students' Day' and they are allowed a full day's entry to interact and learn about new things. The Expo's infrastructure, security and the overall experience were really good and I am very happy with it. The Expo exceeded our expectations."

Gopal Narayan, proprietor, SM Semiconductors Aplus: "Through the Expo, we were looking to expand our business and find new customers. We have been able to achieve our goals through some good enquiries and leads. Overall, I would say that we had a good experience this year too."

Mohd Asri Che Nawi, Design Manager, Sony: "I have visited EFY expo for the first time and it's my first exhibition in India. I like the concept of buyer-seller meet. This kind of arrangement is great for big group of suppliers. This idea is very helpful as it optimises time." ●
