

E-BOT Mini

(From Robosapiens Technologies)

Features

- On-board H-Bridge circuit
- Two direct-current geared motors (BO Type)
- One pair of infrared sensors

| Price: ₹ 1600

RB50 Wire-Controlled Robot Arm

Features

- Second-generation robot arm train
- 100gm lifting capacity
- Requires no soldering

| Price: ₹ 2750

(From VegaRobokit)

Note: The mentioned prices may vary with location and taxes

sign. The processor can be expanded to increase memory and computing power. Various generic communication protocols are supported. Sensor interfaces are general and open so that any expansion is possible. The programming environment in advanced kits supports any kind of programming like structured, graphi-

cal and cross-compilers," he adds.

Talking about educational kits, Jayakrishnan T., director (India), Energid Technologies (Robotics & Machine Vision), says, "There are kits available right from school level (Legos) through postgraduate level (like Actin and Cytton from Energid). The package varies

Robotic kits categories

Robot kits can be categorised based on the purpose for which these are bought:

Toy kits. These kits are normally for young children. It is not a good idea to discount them just because they are toys and their end users are normally kids. The kit can easily keep anyone busy for days. Some toy kits come as do-it-yourself kits.

Academic kits. The academic community has distinct needs. Students normally look for ways to experiment their concepts, extend them and come up with new research and so on. Academic kits are highly customisable and come with a more standardised interface. Compared to toy kits, these kits are likely to be much more open.

Hobbyist kits. A large number of kits in the market are manufactured for individuals interested in the field. These vary greatly in available features, cost and type of components involved.

Advanced research platform. These kits are designed to further the study of robotics. The cost could go up to thousands of dollars. The kits are specifically made for state-of-the-art research in the field of robotics.

WHEN NO ONE IS LOOKING" - HENRY FORD

AT ENTESLA, WE HELP YOU ACHIEVE JUST THAT, BETTER TOOLS FOR BETTER DESIGNS.

ENTESLA

PROGRAMMERS

- PIC
- AVR

MECHANICALS

- GEARED DC MOTORS
- RC SERVO MOTORS
- CHASSIS
- WHEELS

OEM

- IS 56MHz RFID (MIFARE)
- SERIAL TO ETHERNET
- USB TO RS-485

DEVELOPMENT BOARDS

- PIC
- AVR
- 8051
- ARM
- PSOC

ADD ONS

- USB-TTL
- MOTOR DRIVER
- PROXIMITY SENSOR
- WIRELESS (TX/RX)
- ACCELEROMETER
- RELAY CARD
