Assistant Professor,
Department of Software
Engineering, Delhi
Technological University

Surinder Bhagat
Country HR Manager,
Freescall Semiconductor
India

Vijay Marjeshwar
Head-Human Resources,
Infineon Technologies India

save you from the hassles of a long commute to classes on a daily basis, as you would be attending classes only once or twice a week. At the same time, you must be ready to sacrifice your weekends for classes lasting morning till evening.

Opportunities coming your way

A postgraduate qualification is becoming increasingly important for engineers. M.Tech is a long-term investment in your technical career. It will secure your position in the organisation and also help you gain a higher position. Most government organisations and research bodies ask for M.Techs or MEs as they consider these people to be more resourceful than the normal B.Techs or BEs. Some public-sector units even call M.Tech students for interview directly; M.Techs need not give any written test.

If you want to come out from the engineering cocoon and multitask, it

makes sense to widen your knowledge and skills in the management area. Having already obtained a technical degree, an MBA will complete your skills in the wider areas of management that usually include finance, marketing, human resource management, organisational behaviour and management strategy.

Doing an MBA is also important because an engineer today is the primary manager of change within the organisation who implements new practices and technology.

An MBA will make you the perfect candidate for the role of a group leader. As a group leader, you will lead a small technical group and work under minimal supervision. You will be required to provide guidance, set expectations, clarify responsibilities, and provide feedback for project team members in accomplishing tasks and goals.

You will participate as a key contributor and assign work to meet group commitments. You will contribute to the solution of complex technical problems, by providing resources, removing barriers and ensuring application of common approaches. You will demonstrate depth of knowledge of engineering discipline and leverages expertise on projects.

Growing further to the role of an assistant manager, manager and so on, you may eventually reach the top management level! ●

The advantage of a part-time MBA programme is that you can bring and discuss real-world situations and problems into the classroom, where solutions can be explored that could be implemented in real life
