

Top 10 'Phablets' Available in India

Following Samsung's footsteps, some Indian manufacturers have also started exploring the phablet market segment. We bring to you some of the most talked-about phablets in the Indian market

S. ADEETYA

What started as an innovation in 2011 transformed into something bigger and better in the year 2012. A phenomenon called 'Phablet' was introduced by the Korean smartphone maker Samsung with its Galaxy Note device. A combination of smartphone and tablet, phablets are

increasingly becoming popular amongst smartphone users in India. The sheer size and capabilities of the device attract users to this gigantic smartphone-cum-tablet.

Following Samsung's footsteps, some Indian OEMs have also started exploring this market segment. We bring to you some of the most talked-about phablets in the Indian market.

Samsung Galaxy Note 2

In a bid to encash on Galaxy Note's popularity, Samsung launched its successor Note 2. Samsung Galaxy Note 2 sports a 14cm (5.5-inch) HD Super AMOLED display and runs Android 4.1 aka Jelly Bean operating system. The device is powered by a 1.6GHz quad-core processor and 2GB RAM.

Note 2 comes equipped with an 8MP rear camera and a 1.9MP front camera. Similar to Note, it features S-Pen and is available in internal storage options of 16, 32 and 64 GB. Samsung has loaded Note 2 with a 3100mAh battery.

Price: ₹ 34,990

Micromax A110 Canvas 2

Micromax had earlier introduced Canvas, which was soon discontinued only to relaunch in a revamped form. Canvas 2 has helped the company chart a high growth in the domestic smartphone segment. It comes with a 12.7cm (5-inch) screen, 1 GHz dual processor and runs Android 4.0 aka Ice Cream Sandwich.

Other salient features of this phablet include an 8MP camera with flash and auto focus, 0.3MP front camera, expandable memory up to 32 GB, Bluetooth 3.0 connectivity, and a 2000mAh battery that provides five hours of talk time and 180 hours of standby time.

Price: ₹ 10,299

Tips to buy phablet

The phablets market in India leaves you spoiled for choice. The myriad options for phablets confuse consumers, which is why one should be aware of what-to and what-not-to look for when buying a phablet.

Here are some tips:

Tip 1: Phablets are large-screen devices, which makes them heavier than the usual smartphones. They may look glamorous in the first instance but talking on them for long can be really tiring. So before you buy a phablet for yourself, check the weight of the device. It may not remain your favourite gadget if it weighs more than what your hand is comfortable with.

Tip 2: Don't miss out on checking the hardware specs of a phablet before you actually get lured by its affordable price. Check the device on the basis of its display's PPI (pixel per inch) ratio. The higher the PPI ratio, the better the display quality.

Tip 3: Battery can be yet another area of concern if not chosen correctly. Big-display devices eat up the battery faster than usual. So when you buy a phablet, don't forget that the larger the battery, the better the performance you will get.

Tip 4: Durable build and scratch-resistant screen are really important. Corning Gorilla Glass has become a norm these days.
