

opportunities presented by a \$94.2-billion market through innovative domestic product development and value-added manufacturing—rather than relying on imports and low-value-add screwdriver assembly.”

Adding to it, P.V.G. Menon, president, ISA, said, “The next few years will be crucial for the growth and development of Indian ESDM industry. It must now focus on the number of areas where India can increase self-reliance—both creating and leveraging intellectual property assets and the high design capability found in India to develop unique global products for and from India. Examples are areas like computing devices and smart electronics, aerospace and defence, as well as medical electronics.”

Domestic manufacturing may shrink by 6.7 per cent by 2015

According to the 6th ISA-F&S Report, revenues of India's electronic products manufacturing sector could shrink by as much as 6.7 per cent by 2015 with increase in the consumption being more than offset by imports, indicating that government efforts aimed at boosting the domestic industry may not succeed.

The study reports that local manufacturers could lose out on about \$200 billion of potential revenue in the 2011-15 period. The report includes data about semiconductor design, electronic components and electronics manufacturing services sectors, besides consumer electronics products.

The study further indicated that although India's total semiconductor consumption is expected to grow by more than 50 per cent between 2011 and 2015 to \$9.66 billion, it will heavily rely on imports from other global chipmakers.

Gujarat to come up with four electronics clusters

The Gujarat government is planning to come up with at least four electronics clusters across the state over the next few years, besides drafting an electronics policy in order to woo investments into the state. The clusters will be developed at Sanand, Halol, Mandal and Dholera.

The state government is planning
