Awards

F&S names Anritsu Global 'T&M Company of the Year'

Frost & Sullivan has presented Anritsu Corporation with its global 'Company of the Year' award for test and measurement. Anritsu has been awarded for its strong customer relationships, ability to develop products that meet market needs, and value proposition, particularly in introducing test solutions for the LTE market.

Fortune names NI among 100 best companies to work for

For the 14th consecutive year, Fortune magazine has named National Instruments (NI) to the publication's annual list of the 100 Best Companies to Work For. NI ranks No. 35 on this year's list. This honour is a testament to NI's global commitment to creating an exceptional workplace. As NI continues to scale globally, its corporate culture has remained intact.

to have one major company—preferably an original design manufacturer—as the anchor industry in each of these clusters, with an entire ecosystem of vendors that develops around it.

Government departments to procure 50 per cent of laptops and tablet PCs domestically

Department of Electronics and Information Technology (DeitY) has notified all central government depart-

ments to procure 50 per cent of their laptop and tablet PC requirements from domestic manufacturers, subject to the domestic products matching L1 and other technical requirements.

As per the notification, for laptop PCs to qualify as domestically manufactured, 25 per cent of the value addition should be done locally in Year 1. In case of tablet PCs, this has to be 30 per cent. For customised tablet PCs/handheld devices based on tablet technologies that involve additional (or different) accessories or components, the department may issue a separate notification. The value-addition requirement increases 5 per cent every year, thereafter. Year 1 for the purpose of this notification will be up to March 31, 2014.

Draft guidelines for mandatory registration of electronic goods released

Manufacturers of electronics and information technology goods will have to register themselves and their products with the Bureau of Indian Standards (BIS) with effect from April 3, 2013—according to a recent order by DeitY.

Draft guidelines for the approval of a series of products categorised under different product families for implementation of the 'Electronics and Information Technology Goods Order, 2012' have been prepared and circulated to the industry for comments.

Under the compulsory registration, these notified goods would need to be tested at BIS recognised labs. For the purpose, BIS has recognised four labs, which cover consumer electronics products, IT equipment, microwave ovens and electronic clocks.

RoHS compulsion to be effective from May this year

The RoHS-related provisions for electronic products will come into effect from May 12, 2013. In India, the RoHS (Restriction of Hazardous Substances) policy is called E-Waste Rules, which came into effect in May 2012. The notification aims at the safe handling and disposal of the growing volumes of e-Waste in the country. The new RoHS legislation came into force in Europe on January 2, 2013.

There is considerable similarity between India's regulations and the EU regulations. Batteries and radioactive wastes are not dealt with under the Rules 2011, as they are already regulated by existing Indian laws. As with the EU RoHS directive, 39 substances are exempted. The new legislation is called RoHS Recast 2011/65/EU.

DeitY constitutes innovation council on nanoelectronics

DeitY has constituted an innovation council on nanoelectronics. The scope of the council includes the entire electronics system hardware infrastructure enabled by nanoelectronics technology. The focus is also on integrated circuit

For laptop PCs to qualify as domestically manufactured, 25 per cent of the value addition should be done locally in Year 1
