

Electronics For You Expo 2013

An Indian Exhibition For The Global Electronics Industry

If you thought that the fear of global economic slowdown has affected the spirit of the Indian electronics industry, you should have visited EFY Expo 2013. Delhi's mega electronics show provided a platform for real business to the Indian electronics industry. With over 200 exhibitors showcasing their products under one roof, this electronics exposition turned out to be an apt platform for innovators, design engineers and manufacturers of electronic systems and components.

Audience-packed conferences and seminars running in parallel to the expo provided an informative insight into the Indian electronics industry. These proved beneficial for senior decision-makers of the industry and design engineers alike. With an impressive footfall of over 13,000 visitors, the show proved that the Indian electronics industry knows the art of surviving and flourishing even in the worst of situations. The three-day event organised from 21st to 23rd February at Pragati Maidan concluded successfully. It is expected to come back in a much bigger and better *avatar* next year from 29th to 31st January, again at Pragati Maidan, New Delhi.

J. Satyanarayana, secretary, Department of Electronics and IT, addresses the industry on how National Electronics Policy can promote domestic manufacturing
