

Design Tools for Engineers

There are a plethora of PCB and EDA tools available for download from the Internet. Here are a few websites that will help you search for and download tools that you need

SourceForge

SourceForge.net is owned and operated by Geeknet, Inc.—a publicly traded US-based company. It has a dedicated section where one can find nearly all Open Source software that are available for engineers. The listing has information about each software, links to download and the home page of the software project. It is one of the richest collections of free and Open Source software.

Download.com

At Download.com you can search for software for PCs and mobile devices. It is a resource for free-to-try or free software downloads. It also features a list of the most popular downloads, reviews and ratings of software, which help in deciding what to download. The site has more than 90,000 free downloads to offer. A simple search for the term 'CAD tools' returns more than a thousand results that could be of interest to engineers. The search for 'PCB' returns a list of around 35 popular PCB design software.

Softpedia

This website has a collection of 350,000 free and free-to-try software programs for Windows, Unix and Linux operating systems. Each software available for download has been categorised and reviewed. The website strives to deliver only the best products to its users with self-made evaluation and review notes. The site also claims that more than a hundred items are added daily to keep the site always up-to-date. The search engine works in two modes—quick and advanced—which enable users to search for software easily. One can search by name or by category.

Blogineering

Blogineering is a website where engineers and hobbyists can find advice, hacks and information on many important engineering topics. The site has a list of top 25 Open Source software for engineers. The list includes CAD software, element modeling and fluid dynamics applications, and applications for space engineering.

DevelopSpace

This website is an Open Source repository for space exploration. The goal of DevelopSpace is to build technical foundations for space activities of humans. The website is dedicated to advancing the DevelopSpace concept—a general reference for the technical space community—as well as acting as a hosting platform for space-related technical projects. The site enlists Open Source engineering tools such as space-specific software, computer-aided design software, numerical programming languages and visualisation software, and electronic design automation packages.
