RECENTLY INTRODUCED IN INDIA, FROM NEAR AND FAR

CONNECTORS

Twin axial cable

3M India has introduced an ultra-low-profile, high-speed twin axial cable that supports a speed of 10 Gbps and above. The cable provides high-end signal performance and is resonance-free up to 20 GHz. Being flexible, foldable and highly routable, it helps in low attenuation at high bandwidth.

The cable supports high-performance termination, repeatability and a reduced possibility for pin-out error. It is designed for various high-speed internal and external cabling applications in data centres, high-performance computing clusters, storage, servers, switches, routers, etc.

Relay interface module

Shavison has launched a new space-saving relay interface module. The

AS789 has eight relays with single-changeover contacts rated for 5A at 28V DC or 230V AC. When mounted on DIN rail, it occupies only about a third of the space compared to conventional designs.

The module is built with a free-wheeling diode and LED indication. It also has a reverse-polarity blocking diode that prevents damage to PLC outputs in case of incorrect wiring. The module is available with 12V or 24V DC coil voltages, and positive or negative coil looping.

Compact plug connectors

The compact design of Heavycon Compact plug connectors from Phoenix Contact supports the trend toward ever-smaller devices in automation technology. Their plastic housing is

light and well-suited for weight-sensitive applications.

The plug connectors are available in straight and angled line inputs for diameters of 9-15 mm. Housing designs include plug, mounting, socket and coupling.

Along with 8-pin (500V, 16A) and 17-pin (200V, 10A) crimp contacts, a mixed-contact model with four

power contacts (400V/690V, 40A) and two control contacts (250V, 10A) is available. Mixed-contact plug connectors connect different power circuits in one plug connector. The power supply is connected via the power contacts, and sensor signals are connected via the control contacts. This enables the supply voltage to be fed in over the pin insert, which is protected against accidental contact.

COMPONENTS

Intelligent power devices

Renesas Electronics has introduced 14 new intelligent power devices including the μ PD166023. These

devices have enhanced protection functions for automotive body applications, including external lamps such as headlamps, fog lamps, flashers (turn signals) and brake lights, as well as heaters and motors of various types. Features of the new line include power limit protection, instant detection and response to error states, short durability and self-diagnosis.
