

Logic debug solution

Tektronix has announced the next generation of DDR3 probing solutions for logic debug and protocol validation using its TLA7000 series logic analysers with support for DDR3-2133 MT/s and DDR3-2400 MT/s.

The introduction of the high-speed DDR3 interposer for DIMM form factor allows customers to reuse their existing TLA7BBx modules to acquire address, control, command and data signals for all DDR3 speeds—ranging from DDR3-800 MT/s to DDR3-2400 MT/s as well as low-voltage DDR3. The interposer uses ultra-high performance SiGe hybrid ASIC technology to provide true analogue insight at every DDR3 input/output.

COMPUTING

Board support package

LynuxWorks has announced the availability of a board support package and corresponding DO-178B level-C artifacts for the Curtiss-Wright SVM/DMV-183 rugged single-board computer. The package brings FAA Level A certifiable real-time operating sys-

tem to the Curtiss-Wright board and adds support for both single and dual Freescale MPC7447A/7448 PowerPC processors with AltiVec technology. The units also feature 64kB L1 cache, 1MB L2 cache, three Ethernet interfaces and two 64-bit PMCs on independent PCI buses.

Dual-socket bladed and server platforms

Kontron has introduced two new carrier-grade products that channel the performance and bandwidth of the new 8-core Intel Xeon processor E5-2600 family.

The 'dual-socket' 10GbE node blade AT8060 is based on the standardised Advanced Telecom Computing Architecture (AdvancedTCA) specification. Featuring a total of up to 16 processor cores or 32 threads, four memory channels per processor running at 1600 MHz, one Advanced-MC bay and new intelligent power management controls, the AT8060 is best used for high-compute and content-aware network applications implemented on Kontron 10G and 40G AdvancedTCA open modular core platforms.

The NEBS-3 compliant communication rack-mount server CG2200 combines high memory, flexible I/O and storage options, and dual redundant AC or DC power options into a compact 2U, 51cm deep form factor.

TOOLS & EQUIPMENT

Wireless module

Digi International has introduced an 865MHz wireless communication module. The XBee 865LP offers up to ten channels and reduces interference in noisy environments. Due to the range of

the module, the signal penetrates walls and other barriers in urban environments.

The XBee 865LP is based on Analog Devices' ADF7023 transceiver and provides interference blocking, sensitivity and low current consumption. It can be used in energy management, battery-powered sensor deployments and other wireless networking applications.

STORAGE

microSD cards for LTE smartphones

Samsung Electronics has launched microSD cards with ultra-high-speed interface (UHS-1) for LTE smartphones and advanced mobile applications. The memory cards come in a 16GB density, and comprise Samsung's 20nm-class

64Gb toggle DDR 2.0 devices and an advanced Samsung controller supporting the UHS-1 interface. These have maximum sequential read speeds of up to 80 MB/s.
