

Next wave of telecom growth from rural India: Deloitte

Deloitte predicts that the next wave of telecom growth is likely to emerge from rural India where 3G-enabled value-added services could be the biggest contributor. The tele-density in rural India is less than 36 per cent as compared to 166 per cent in urban areas.

In order to augment the growth of the rural market, operators would increasingly use the voice platform as well as localised content to ensure relevance and widespread adoption in rural zones.

Deloitte also predicts that the rural growth will expand the demand for telecom equipment. Lack of physical infrastructure and skilled specialists in social sectors like healthcare, banking and education in rural areas makes the need for mobile based solutions all the more attractive.

Clean energy in India to get US grants

The US Trade and Development Agency (USTDA) has signed two grants to support US business developments in India's clean energy infrastructure development. These projects respond to the joint commitment made by US President Barack Obama and Prime Minister Dr Manmohan Singh in late 2009 to greatly expand energy efficiency and clean energy cooperation and to form a partnership to advance clean energy.

The first grant will support a feasibility study for Azure Power—a private-sector solar power developer based in India. The study will assess the development of a rural micro-grid solar power project that will bring electricity to remote villages in India. The second grant will finance a feasibility study for CESC Limited for the implementation of smart grid technologies across its electricity distribution networks in Kolkata.
