Huge job cuts projected in telecom sector

In wake of 2G licence cancellations, scores of jobs in the telecom sector are likely to be slashed—predict HR experts. Around 122 licences were cancelled by the Supreme Court resulting in a bumpy ride for many telecom players. Consolidation and right-sizing are expected in the industry over the next one year.

HR firm GlobalHunt's director Sunil Goel said, "There is more supply of skilled and trained resources than demand in the market."

Airtel launches 4G service in Kolkata

Bharti Airtel has launched India's first 4G service in Kolkata. The service was launched on a network based on TD-LTE, making India one of the first countries in the world to commercially deploy this technology. According to the company, the new technology will trigger a new phase of accelerated equitable and inclusive economic growth through proliferation of broadband services as envisioned in the National Telecom Policy.

Commenting on the launch, Sunil Bharti Mittal, chairman and managing director, Bharti Airtel, said, "We are confident that others will follow

in this direction and participate in our pioneering effort of making TD-LTE the de facto 4G standard in India."

Existing 3G services allow download speeds of up to 21 Mbps. 4G allows download speeds of up to 100 Mbps, which is nearly five times higher than that offered by 3G.

AMD clocks 36 per cent growth

AMD, known for its graphics cards, has recorded a growth of 36 per cent in India—higher than the entire market growth. The performance can be boosted even more this year because of the amount of opportunities in the market, according to Rory Read, chief executive officer at AMD.

Apple is likely to opt for AMD solutions for its next ultraslim MacBook Air notebook. The last MacBook was developed with Intel's Sandy Bridge platform.

AMD has come out with a Fusion technology, which integrates graphics processing capabilities into the processor. Intel has entered the smartphone market with Lava's XOLO 900 and there are speculations that AMD may buy MIPS—an architecture that competes with ARM's predominance in the smartphone and tablet technology and jump in the smartphone market too.
