

Meyer Burger begins India operations

Swiss solar equipment maker Meyer Burger has forayed into India by opening a centre in Pune. It will supply machinery and system solutions for the solar, semiconductor, and sapphire and opto-electronics industries.

Peter Pauli, chief executive officer of the Meyer Burger Group, said, "The office underscores our long-term interest in the development of the photovoltaic industry in India and emphasises our focus on customer-specific solutions supported by local sales and service organisations."

The company is looking at India as a huge potential market.

L&T commissions India's largest solar plant

L&T Construction, a subsidiary of the Larsen & Toubro conglomerate, has commissioned India's largest solar photovoltaic-based power plant. The 40MW solar plant is owned by Reliance Power at Dhursar Village in Jaisalmer district of Rajasthan.

"With the commissioning of this plant, L&T Construction has installed 114 MW of utility-scale solar PV power plants over the last fiscal," the company informed.

In order to generate 40 MW, the plant has been equipped with more than 500,000 high-output-generating thin-film solar PV modules and thirteen 3.5MVA power transformers. It can supply more than 70 million units of clean and green energy to 75,000 households.

element14 increases lighting inventory by 35 per cent in Asia Pacific

The portal of element14 has announced additions to its latest instalment of 'element14 Features' that focuses on lighting solutions, core products and bestsellers for lighting and LED engineers in Asia Pacific. element14 has increased its stock of lighting products over the past year by 35 per cent and now offers over 10,000 lighting products from 115 brands from industry

leading suppliers such as Avago Technologies, Cree, Texas Instruments and XP Power for high-power LEDs, LED drivers and evaluation kits, LED power supply units, lighting control MCUs, heat-sinks and accessories.

Lighting engineers can choose from a variety of ready-to-use LED modules from suppliers such as Vishay and Helieon. Over 175 application notes, 50 white papers and 75 training modules from industry-leading suppliers such as Cree and Linear Technology are available for download in 'element14 Features' dedicated resource centre.

Datawind working on Aakash 2

Datawind, the manufacturer of the world's cheapest tablet Aakash, is now working with IIT Mumbai for Aakash 2. The company is likely to start supplying the tablet to government this month.

Only a few hundred tablets of the first version reached the hands of students. Suneet Singh Tuli, chief executive officer of Datawind, blames IIT Rajasthan for the failure of the project. The company had supplied 10,000 devices to IIT Rajasthan as part of an initial order of 100,000 tablets. IIT Rajasthan, the nodal agency for implementing the project, has been accused of rejecting the tablet based on biased

and unscientific testing methodology.

Datawind claims IIT Rajasthan put up roadblocks in a bid to favour other firms. The company is now working on Aakash 2, which, unlike the first version, supports multitouch on a capacitive screen and runs on a better processor. It sells a commercial version of Aakash by the name Ubislate.

HP collaborates with Dolby to offer superior PC sound

Hewlett-Packard India has collaborated with Dolby Laboratories to offer world-class entertainment features in its new range of consumer notebooks. With the Dolby Advanced Audio v2 for cinematic surround sound, HP Folio 13 marks the latest in a series from HP, in order to connect with entertainment enthusiasts in the country.

"According to a recent research report, 23 per cent of Indian youth said they spent more time listening to music, whilst 83 per cent said music formed a very important part of their lives. The youth in our country—a very significant part of our target audience—are therefore looking for best-in-class music capabilities even when it comes to their PCs," said Ranjiv Singh, chief marketing officer, HP PSG India.
