

Go Solar with Smart Ideas

The IA3341 Series

- Programmable Computing Platform with Integrated Communication I/Os
- An I/O Combination That's Just Right for Solar Applications
- Built-in Modbus TCP Library to Streamline Time-consuming Tasks

The IA3341, which is designed for solar power and environmental monitoring applications, is based on the MOXA ART ARM9 industrial processor, and features 2 RS-232C/422/485 serial ports, dual LANs, 4 digital input channels, and 4 digital output channels. In addition, the IA3341 computer has 2 analog input channels and 2 thermocouple channels. By supporting multiple interfaces, the IA3341 can connect to different types of devices, making it particularly well-suited for solar power applications. Meters, sensors, and other devices can all connect easily to the IA3341. As an added plus, the built-in Modbus TCP library makes it easy for users to read AI and thermocouple data, and with the built-in web server, it is easy to send monitoring data back to the control center.

Rcore Community

The Rcore Community is a place where everyone can share their ideas about thoughts on embedded computing in the interactive Rcore forum and learn from our Rcore experts. Rcore has also appeared on one of the most powerful social networking tools, Facebook, as a communications platform for all embedded computing professionals and users. Now you can follow us on Facebook to quickly access more up-to-date information about new embedded computing technologies, get the latest product news, download sample code, and a lot more!

Come and visit Rcore Community at <http://rcorecommunity.moxa.com>
