

Allegro Current Sensor ICs Providing Green Energy Solutions in Photovoltaic (PV) Inverters

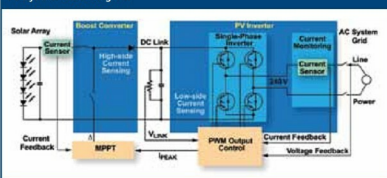

Allegro's family of fully integrated current sensor and linear ICs offer high accuracy sensing solutions for grid tied PV solar systems. Allegro's surface mount packages provide small form factor, fully integrated current sensor ICs with galvanic isolation. These ICs can sense 5 to 50 A of continuous current and are rated to 3000 VRMS isolation. The series resistance of the package primary conductor is nominally 1 mOhm and provides for highly efficient current measurement in PV applications.

The Allegro ACS758 family of parts delivers an even lower 100 uOhm series resistance and is capable of sensing current from 50 to 200 A. Allegro's A1360 family of devices is available in a 1 mm SIP package and capable of sensing current greater than 200 A.

Allegro Advantages for Solar Inverters

- High accuracy ZERO Amp output voltage and device sensitivity achieved with Allegro factory programming
- Capable of sensing AC current and DC current
- Cost-effective solution compared to closed loop sensor technology
- 3000 VRMS isolation
- High temperature operation up to 150°C
- 100 uOhm and <1 mOhm internal conductor resistance for low power dissipation
- Small factor, low profile packages compared to current transformers
