

Power Inverters and UPS Industry Changing Dynamics

Inverters and UPS are here to stay as long as there are power cuts. Manufacturers keep coming up with innovative ideas such as smaller inverters and solar inverters to expand their market

UMA GUPTA

India currently faces an acute power shortage. The consumption of electricity is increasing every day with more people buying energy-guzzling appliances such as air-conditioners. At the same time, there has not been much improvement in power availability as the government has not been able to set up power plants holistically. If the availability of power improves in one state, it falls short in another.

In Tamil Nadu, for instance, electricity demand has touched 11,500 MW but generation remains at 7500 MW,

prompting the government to resort to long-duration power cuts. The same scenario exists in Maharashtra, where power shortage has impacted industrial production.

These severe power cuts have given power backup companies a reason to smile. They are busy meeting the increased demand for inverters and uninterruptible power supply systems (UPS). It seems that the demand will keep going for many years, unless the government spends substantially on new power plants.

In keeping with the market dynamics, the inverter and UPS industry is also experiencing many changes.

Some of the major UPS and inverter players

- APC by Schneider Electric
- Aplab
- Best Power Equipments (I)
- Convergence Power Systems
- DB Power Electronics
- Delta Power Solutions India
- Emerson Network Power
- Genus Power Infrastructure
- Intex Technologies
- Luminous Power Technologies
- Microtek International
- Numeric Power Systems
- Pep Infotech
- Su-Kam Power Systems
- Techser Power Solutions
- Tritronics (I)
- True Power International
- Uniline Energy Systems
