

Technical know-how of MPPT Solar Chargers

MEDI, established in 1987, pioneers in Analog, Digital, Power Electronics, Microcontroller, DSP and RF designs

MPPT solar charger up to 2KVA – 24V to 96V, 40A max

DSP based two phased interleaved switching, MCCV charging (Maximum Current, Constant Voltage – charging current will gradually reduce to zero in constant voltage region)

Technical know-how cost – Rs.1,50,000

BOM of 24V/40A MPPT = Rs.2000 including DSP module.

MPPT solar charger up to 10KVA – 36V to 240V, 100A max

DSP based Eight phased interleaved switching, Internal monitoring and recording of data, done using RTC and flash memory with year, month, date, day, hour & minute. Data can be stored up to one year which can be monitored through RS485 / USB.

Technical know-how cost up to 10KVA is Rs.7,00,000.

Material cost of 5KVA MPPT solar charger is approx. Rs.8000 including DSP module.

Product for sale—zero drop solar charger 12V 10A to 96V 80A Cost of 24V 10A = Rs.290, 24V 30A = Rs.450, 24V 60A = Rs.600, MEDI DC-CT +/- 80A = Rs.180.

Range of inverter designs – 300VA to 30KVA three phase and single phase DSP based pure sine wave inverter with priority solar charging.

Bright Science means design freedom and increased safety for LED lamps

LED lighting enables reduction in electricity consumption and long life. LED housings must deliver superior thermal management capability to dissipate the heat generated by the LED and keep the junction temperature of the LEDs lower. This has an impact on the efficiency as well as lifespan of the LED lamp. DSM's portfolio of thermally conductive Stanyl® TC enables excellent thermal management while enabling attractive designs at low cost and compliance to all safety standards.
