

to any Full HD or Blu Ray movie that you download.

Contrast ratio. Contrast ratio is primarily defined as the difference in contrast between the black and white portions of the TV screen. Higher contrast ratio will offer higher image quality. You must try to identify the actual contrast ratio of the TV that you intend to buy.

Design element. While screen thickness does not affect the overall picture quality, LED TVs add some aesthetic element to your living room. Sleek TVs look much better and are easier to mount on a wall.

Smart features. Smart TVs were initially known for their integration with the Internet, which was possible via the local Wi-Fi network. But gradually brands like Samsung, LG

and Sony have realised that relying solely on access to Facebook, Twitter and YouTube will not offer much resilience in the current scheme of things, which is why they have also introduced new innovative features that vindicate the term 'Smart.' Smart TVs are not just about Internet connectivity anymore, features like motion control and voice recognition are an integral part of LED TVs available in the country.

Less power consumption. In a country like India, where power is a big problem, it is imperative that the television supports the core objective of power saving. Previous technologies like plasma and LCD failed to solve the problem but with LED TVs, the market has found its perfect match. LED TVs consume lesser power than LCD and plasma TVs.

SOME POPULAR OPTIONS

If you want a reasonably big television at home, and you are ready to shell out good money as well, the Indian market has a host of options to offer. Below is the list of some LED TVs in sizes of 140 cm (55 inches) and 152 cm (60 inches).

Sharp LE630M 152cm Full HD LED

Sharp LE630M LED TV comes with a 152cm (60-inch) Full HD display. This TV offers a high resolution of 1920x31080 pixels, which results in high-quality images. The TV comes with Fine Motion Advanced at 100 Hz, which reduces the chances of motion blur. The TV is sleek and compact, which adds up to the technology in-built. It comes with a USB slot that allows you to watch movies and listen to songs from a USB. The SRS TruSurround HD and Bass Enhancer improve the overall sound quality of the TV. It also has an inbuilt HD digital TV tuner, which is found in only a handful of TV sets these days.

Sharp has priced it at ₹ 150,999

Sony BRAVIA KDL-55HX750 3D Full HD LED

Sony Bravia KDL 55HX750 is a 140cm (55-inch) full HDTV. Its 3D feature offers powerful performance without consuming too much power. It can be run with an input of 110-240 V. The TV comes with a dynamic edge LED backlighting feature that includes frame dimming, which offers bright and vibrant colours in night-lit shots. The TV is Skype-compatible and comes with built-in Wi-Fi. It has an aspect ratio of 16:9, which widens the image created, rendering theatre-like viewing experience.

Sony has priced this TV at ₹ 149,900

Panasonic TH-L55ET5D (FHD) LED

Panasonic's 3D LED (FHD) TV supports polarised film on the display surface, which offers left and right images on the display with horizontal scanning lines. A 300Hz backlight scanning increases the number of frames from 50 to 100 frames per second, which results in improved picture quality. The TV converts 2D images into high-quality 3D images in real time. The other exciting feature about the TV is that it can be used to convert external 2D images and save them onto SD memory cards into 3D images. The TV comes with in-built Panasonic VIERA Connect, which brings all the TV-based content on the large-screen TV via remote control. Other features include built-in Wi-Fi and DLNA support, game mode, four HDMI terminals and three USB ports.

Panasonic has priced this TV at ₹ 128,649
