

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM AND LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed intensity to allow for natural LED intensity degradation over its operating lifetime

through? Agreed, the idea seems quite distant and something that is seen in Hollywood's Sci-Fi's but you would be amazed to know that a company has already released a prototype of a transparent mobile phone! Polytron, which is a global systems integration firm based in Duluth, GA, has unveiled an almost transparent cell phone. However, the battery, circuit board and the memory card are still visible.

While it is not a fully functional prototype, it is expected that such phones will be available commercially by 2013 end.

\$89 Odroid U2: A Raspberry Pi alternative

A trend that was kickstarted by the \$35 Raspberry Pi credit card-size mini computer is being followed religiously by several OEMs. Several manufacturers are now trying to put in more power without compromising much on the size and by keeping the price just under \$100. One such Raspberry Pi alternative is the higher-powered Odroid U2 computer, which was announced in November last year.

The Odroid is made mainly for developers but anybody who has a little technical knowledge can use it as a full desktop PC. The Odroid U2 is priced at \$89 and is now available in the market. As a high-price Raspberry Pi alternative, the Odroid U2 is, of course, more capable than the Raspberry Pi.

Solar-powered water filtering technology

Solar power has become the order of the day. Leveraging on the natural source of energy, WADI showcased its solar-powered water filtering technology at CeBIT this year in Germany.

Martin Wesian, founder and chief executive officer, Heli-

Water filtering technology

oz, the company behind WADI, said about their 'innovative and affordable' water filtering device based on solar energy that the technology works in a unique way as it allows water to get purified with the help of UV rays coming via daylight.

At CeBIT, WADI explained the users as to how water contained in the biodegradable plastic bottle is cleaned. After the water is cleaned using this solar-powered technology, a little face icon starts smiling and the water is ready to drink. The makers of this purifying technology claim that the water remains clean for the next 48 hours (only). The product costs less than 10 dollars.

Noise cancelling chip from Toshiba

Toshiba has come up with an audio codec chip for mobile phones featuring improved background noise
