

Affordable and Powerful 16-bit MCUs for Automotive Instrument Clusters

The RL78/D1A is suited for automotive instrument clusters with dedicated features such as Sound Generator, Stepper Motor Controller/Driver and LCD Segment Controller/Driver, which integrates all the functions required for automotive instrument cluster control, allowing more compact and lower cost systems.

Advanced Features

■ For two-wheeled vehicles

- From as low as 48-pin count
- 7mm x 7mm footprint, the industry's smallest single-chip MCUs for two-wheeled vehicle meter applications
- LCD controller/driver with 27 segment x 4 common

■ For four-wheeled vehicles

- 100-pin package
- 256KB on-chip flash memory
- LCD controller/driver of 53 segment x 4 common

■ More compact and lower cost systems

- 1 to 4 channels of stepper motor controller/driver with Zero Point Detection (ZPD) function
- Sound generator
- 8KB on-chip data flash eliminates the need for external EEPROM for odometer data
