

Crystal-free 8-bit USB PIC® microcontrollers cut system costs and power consumption

0.25% clock accuracy enables USB connectivity, eliminating the need for external crystal

Microchip's lowest-cost and smallest-form-factor USB microcontrollers (MCUs), feature pin counts of 14 to 100 pins and are the first 8-bit MCUs to integrate LCD control, battery-backed RTCC, and USB on a single chip.

Microchip's latest USB PIC® MCUs feature internal clock sources with 0.25% clock accuracy to enable USB connectivity with no external crystal. They are also the first USB MCUs to combine pin-counts ranging from 14 to 100, with high peripheral integration and up to 128 KB of Flash. The eXtreme Low Power (XLP) technology also keeps power consumption down to 35 μ A/MHz in active mode and 20 nA in sleep mode.

Lowest-cost and smallest-form-factor

The PIC16F145X MCUs give you USB connectivity and capacitive touch sensing, in addition to a wide range of integrated peripherals with footprints down to 4x4 mm.

High-performance touch-sensing with USB

With an integrated Charge Time Measurement Unit (CTMU) and 1.8 V to 5 V operation, PIC18F2X/4XK50 MCUs are pin-compatible with legacy PIC18 MCUs, giving an easy migration to higher-performance.

USB plus LCD control and a RTCC with Vbat

The PIC18F97J94 family gives you USB connectivity with LCD control, and a battery-backed real-time clock/calendar (RTCC), all on a single 8-bit PIC® microcontroller.

GET STARTED IN 3 EASY STEPS:

1. Choose a peripheral mix and pin count to suit your application
2. Use the free USB stacks and software drivers for faster design
3. Start developing with low-cost development kits
