Apple Introduces Motion Control in iOS 7

The iOS beta version, which was recently rolled out, will provide a new and innovative manner of controlling functions on Apple's devices, including features like the ability to track user's head movements with the iOS 7.

Curved OLED TV

Samsung's 139.7cm (55-inch) screen super-thin OLED TV comes at an exorbitant price

On the close heels of LG, which has both curved and non-curved OLED TVs in the market, Samsung has announced its offering in the market as well. Priced at \$13,000, Samsung Electronics has unveiled its first curved, super-thin OLED television, which will go on sale shortly.

LG has so far managed to sell a few hundreds of its OLED screens. Samsung had used OLED screens in its Galaxy S4, and it expects that the same fate will be achieved with its 139.7cm (55-inch) screen television that comes at an

exorbitant price. The company plans to start retailing it very soon, though the countries where it will be sold is still not clear.

The company said, "We have just introduced our first OLED TV and have to see consumer response to gauge overall market demand."

Researchers have been working on the organic light-emitting diode technology (OLED) for a long time as

it is expected to be the future of consumer electronics displays. It has a faster response time and gives crisper picture resolution.

Price: ₹ 780,000 approx. (\$13,000)

SoundBar with Detachable Wireless Speakers

Philips HTL9100 SoundBar with detachable wireless speakers brings Fidelio innovation, build quality and sound excellence to home cinema

By offering Fidelio quality and innovation in a SoundBar, Philips has created the perfect solution for people seeking the combination of style, convenience and the authentic home-cinema experience—via the unique choice of detachable speakers and surround sound on demand.

Used with the surround speakers attached, the HTL9100 operates as a single sidebar offering high-quality stereo or a wide sound stage via virtual surround sound mode. However, remove and relocate the wireless surround speakers and the intelligent

system automatically switches configuration to multichannel mode and decodes 5.1 signals as true surround sound.

At the core of the Fidelio SoundBar are high quality TI Class-D amplifiers—with a built-in DAC—powered by a compact switch mode power supply to provide a full digital architecture, delivering

highly efficient audio amplification and premium audio quality. Multichannel audio decoding and Philips' proprietary audio features are both supported by a powerful, high-quality, Cirrus Logic 32-bit DSP processor.

Price: ₹ 63,000 approx. (£699)
