

Fig. 5: Build the solution

captured in one second.

Testing procedure

1. Open Visual Studio 2010, followed by the MotionDetection program from 'File' menu. Build the program by clicking 'Build Solution' option as shown in Fig. 5. If there is no error, you can see 'unwanted motion detector' executable file under 'Debug' folder.

2. Click the executable file having an eye icon. The program prompts you to select the video capture device. We have used Quantum webcam during testing. The program output is shown in Fig. 1.

3. Plug in the webcam into the USB port of your PC or laptop. Install the webcam driver. Select the destination folder where you want to store the im-

age. Otherwise, by default the image will be stored in D drive. Turn on the webcam by clicking 'on cam' button just below the screen to start recording the image. You will see the image on the PC monitor as shown in Fig. 2. When you move, the same image will be shown on the right side of the screen along with 'motion detected!' message. This image will be automatically captured and stored in the selected folder.

4. Open the destination folder. Here you can see the image file in bmp format. ●

The author is a B.Tech in electronics & communication engineering from Punjab Technical University. Currently, an embedded firmware developer at Geotran, Roorkee, he likes working with the latest high-speed tools

FILCON ELECTRONICS PVT LTD

Manufacture of Professional Grade Plastic Film Capacitor Close Tolerance of 1% & High Stability, 63 Volts to 30KVDC Exports to: Switzerland, Brazil, Singapore & China.

ISO 9001:2008 Certified
www.filconelectronics.com

Dielectric:

- Metallised Polyester
- Metallised Polypropylene
- Mixed Dielectric
- Film & Foil

Types:

Axial, Box, Flat

Applications:

- Automotives Electronics
- Communications
- Defence
- Energy Meters
- X2 Capacitors

- PLCC
- Railway Signalling
- Wave trap
- Audio Capacitors
