

Tablet PCs Under ₹ 10,000

For buyers not looking at expensive models like Nexus 7 and iPad Mini, there are plenty of tablets to consider. There are models that have got rave reviews for their pricing, features and even performance. But before you spend, do check out this guide to ensure that you make the best purchase.

DIKSHA P. GUPTA

One of the days when tablets used to be the toys of CXOs. A latest report from research firm IDC reveals that the overall tablet market has grown at a rather fast pace in India, particularly in the last one year. The total tablet shipments in the country amounted to 2.66 million pieces in the year 2012. This is a whopping 901 per cent rise in terms of year-on-year growth from 2011. Low-cost tablets with 17.7cm (7-inch) screen size comprised 78 per cent of the total shipments in Q4 2012.

Tablets have become the order of the day, quite literally. The real market scenario seconds what IDC had predicted. Victor Shanxin, president, Huawei Devices India, comments, "Tablets are for everyone. The 17.7cm models have captured the market in an unimaginable way. These tablets enjoy the majority of the market share. The reason is simple. They come handy and can replace the smartphones perfectly, in case they have the calling facility. They can also be the perfect multimedia device on-the-go."

Giants like Apple were also forced to enter this segment once they realised the importance of this segment. Smelling the demand in the small-sized tablet market, Apple

launched its iPad Mini only last year and is reportedly preparing to bring its successor too.

Indian market, being price-sensitive, adopted the 17.7cm tablets much comfortably compared to the other geographies across the globe. Along with international brands like Apple, Samsung, Amazon, Asus and Huawei, home-grown companies including HCL, Micromax, Lava, Spice, Karbonn and Intex have also gone aggressive in terms of launches.

In the market, you can find a host of options with single-core and dual-core processors. That said, there are some companies who want to take advantage of the growing technology and are going to the extent of offering quad-core based tablets in the sub-₹ 10,000 price range. So consumers can watch out for some really good alternatives coming their way in the near future.

For buyers not looking at expensive models like Nexus 7 or iPad Mini, there are plenty of tablets to consider. There are certain models that have come out in the market unscathed and got rave reviews for their pricing, features and even performance. But before you spend, you must check out this guide to ensure that you make the best purchase.
