BSNL to invest ₹ 40 billion in network expansion

BSNL is in the process of expansion to strengthen its position in the country. According to recent reports, the state-run telecom operator will reportedly be investing ₹ 40 billion in this fiscal to expand its mobile network. This will involve installing 8700 towers.

600 per cent surge in malicious applications

With the rising number of smartphone users, there has been unprecedented rise in malicious applications, which grew globally by over 600 per cent to 276,000 in last financial year, according to Juniper Network's third annual mobile threats report.

Fingerprint scan may become must to get new SIM

With an aim to ensure national security, DoT had mandated that all telecom service providers have to physically verify an applicant before issuing a SIM card. If the latest proposal from DoT is accepted, telecom operators will require to take fingerprint scan of the customers before issuing any new SIM cards.

DoT puts ban on sites used for sharing pornographic content

DoT has directed internet service providers (ISPs) to block 39 websites that allow users to share pornographic content. While most of the sites are web forums, where internet users share images and URLs to download pornographic files, some of these are also image hosts and file hosts that are used to store and share files that are non-pornographic.

Google to float balloons over rural India for internet connectivity

Google will float helium balloons over rural India for Internet connectivity if an experiment testing the concept yields promising results, a senior official of the company said. "Though we are still in the pilot phase, we have received several queries on the project and India has also shown great interest in the project," said Todd Rowe, managing director for global sales channels at Google.

Samsung to invest ₹ 5 bn to boost mobile production in India

Reportedly, Samsung has planned to invest 500 billion rupees to further pump its mobile production capacity in India. An industry source told PTI, "Samsung is working to invest ₹ 5 billion in its mobile production facility in India."

Fujitsu, ARM announce licensing agreement

Fujitsu Semiconductor Asia Pte Ltd (FSAL) and ARM today announced a licensing agreement that enables Fujitsu Semiconductor to release a system-on-chip (SoC) solution which takes advantage of the benefits of ARM big.LITTLE™ technology and ARM Mali-T624 graphics processing.

cluster city and can come up anywhere between the Delhi-Mumbai corridor. The deemed name for the city would be 'Ho Chi Minh.'

India ranks 8th in renewable energy attractiveness index

According to an Ernst & Young survey, India's ranking slipped from fourth to eighth position in renewable energy attractiveness index due to several challenges including high entry-barriers for foreign investors and the rising cost of financing.

"A high barrier to entry for external investors causes India to score lower than most of its top ten rivals. Also, bankability is jeopardised by the high cost of financing and significant infrastructure barriers here," PTI quoted E&Y India partner and national leader for clean-tech, Sanjay Chakrabarti, as saying.

Major international players try to cow down India's business potential

Global technology companies are bullish on business prospects in India but want regulators to accelerate the process of approving their proposals for upgrading communication networks across the country, participants at an IT event held in Singapore said.

India would face telecommunication system stress, jamming of connections and strains on systems if it slows down any further upgrading of the entire network, said exhibitors at the CommunicAsia2013 IT exhibition. The exhibitors with proposals submitted to the regulators for the past two years said India must make a switch to Internet-based and high-speed fibre cable systems from the current analogue, fixed phone lines and cable-based communication systems. The plans include the launch of India-dedicated satellite, very high-speed digital subscriber line system and high-tech hardware such as voice over internet protocol (VoIP) equipment among others.

CommunicAsia2013, EnterpriselT2013 and BroadcastAsia2013 were held from June 18 to 21 at the Marina Bay Sands, Singapore.
