Poster and learn more about this award-winning Signaling Tester .

The MD8475 Signaling Tester

is an all-in-one base station simulator supporting LTE FDD and TDD, W-CDMA/HSPA Evolution, TD-SCDMA, GSM(E)GPRS, and CDMA2000® 1X/1XEV-DO Rev. A. It supports functional and application tests for multimode LTE smartphones and devices with excellent cost-performance ratio.

- Windows 7-based instrument supports internal or external installation of application servers and control of other instruments
- Smart Studio GUI supports easy setup of single and multi-cell test environments
 - Inter-RAT Handover, CS-Fallback, eCS-Fallback, Redirection, and Reselection are All Available
- LTE data throughput up to 150 Mbps (downlink) and 50 Mbps (uplink)
- Built-in Call Session Control Function (CSCF) server supports VoLTE and testing of other Rich Communications Services (RCS)
- Support for both HSPA Evolution Rel. 7 and 8 including DC-HSDPA (42 MB/s)
