

Spot an Error

And WIN Award!

You can win one thousand rupees plus a certificate from the editor of Electronics For You magazine if you spot and report any factual error in the latest issue of the magazine. Your report will be published in a coming issue of the magazine, giving credit to you.

Though every care is taken in preparation of the content for the magazine, an error can slip in at times. So we invite our learned readers to point out any error that they spot, for the benefit of the other readers.

Rules:

- The error has to be reported before end of the month that is mentioned on cover of the magazine
- The report has to be sent in writing or by email addressed to the Editor, EFY Magazine (editsec@efyindia.com)
- The error should be of factual nature, in the information published in the magazine, and not a grammatical or syntax error
- The correct information should also be provided along with the error spotted by you
- In case more than one person reports the same error, the one whose report reaches us the earliest will get the award money
- In case two or more persons jointly report an error, the award money will be divided amongst them
- EFY employees, their family members and friends, and EFY associates and their family members and friends are not eligible
- Decision of the editor will be final in this matter

electronics
FOR YOU

the attention of the crew by flashing lamp in the direct vision of the pilot.

Multi-function display units are used for presentation of the aircraft data. Areas on the screen can be reserved for display of warning messages.

The engine indication and crew alerting system (for Boeing) or electronic centralised aircraft monitor (for Airbus) allow the pilot to monitor the following information: values for N1, N2 and N3, fuel temperature, fuel flow, the electrical system, cockpit or cabin temperature and pressure, control surfaces and so on. The pilot may select display of information by means of button press.

Electronic flight bag

Electronic flight bag is an electronic information management device that helps pilots perform flight management tasks more easily and efficiently with less paper. It is a general-purpose computing platform intended to reduce, or replace, paper-based reference material often found in the pilot's carry-on flight bag, including the aircraft operating manual, flight crew operating manual and navigational charts (including moving map for air and ground operations).

Electronic fly bag

Airline operators induct aircraft at various stages spread over many years. Configurations of the aircraft also vary

as the engine selection for a particular aircraft depends on the customer. Airline operators have a major challenge of managing the maintenance, repair and overhaul (MRO) data for different aircrafts and different subsystems covering all disciplines of engineering.

Now each aircraft is equipped with an electronic fly bag that has all the engineering data for maintenance schedules as well as commercial data like the fuel consumed and passenger occupancy.

e-flight offers a comprehensive approach to data management that will tie the aircraft into an organisation's ground-based computer networks. The airlines use e-flight to set up information technology infrastructure in order to keep the aircraft in the loop on the ground or in the air.

Others

Other advanced features being included are the weather radar system and free-flight. The weather radar system provides the pilot with a complete view of hazardous weather using artificial intelligence and image processing technologies to automatically detect, characterise and avoid severe weather.

Free-flight is a concept of air-traffic management based on satellite navigation and data link communication. ●
