

Touch The Future

The Aeroflex S-Series is the future and the future is **touch**. The future is fast and complex and needs an instrument platform to meet your evolving needs. The S-Series has evolved to make complex measurements fast with the simplicity of our unique totally touch measurement interface.

The S-Series is uniquely scalable with multiple instruments 'Aerolocked' together within a standard 19" format. Build your measurements from our S-Series range of signal generators, signal analyzers and function modules and control them using Aeroflex automation framework.

The SGA sets the standard for switching speed and noise. **That's fast.**

The SGD leads the way with the bandwidth required for the latest wireless standards including 802.11ac, LTE-A and beyond. With coherent signal generation over multiple sources for MIMO. **That's smart.**

The SVA is the widest band and fastest signal analyzer in its class. Now that's fast and smart.

Touch the future with the fast and smart Aeroflex S-Series!
