

R&S® SMBV 100A

Vector Signal Generator

At a glance

A state-of-the-art vector signal generator must be flexible and offer good signal characteristics along with an outstanding cost/benefit ratio. In all of these areas, the R&S®SMBV100A sets new standards in the mid-range class of instruments.

Due to its optimal scalability, the R&S®SMBV100A is easy to customize to meet specific customer requirements. For production applications, a cost-effective solution for playing back predefined test sequences is available with the optional baseband arbitrary waveform generator (ARB). And where it really matters, the optional baseband coder provides impressive realtime capabilities. It allows the generation of even complex signals directly in the instrument-no external signal generation software is required.

The R&S®SMBV100A has also been designed for ease of servicing. Together with its scalability, this helps to ensure very low cost of ownership. The instrument's compact size and graphical user interface for intuitive operation help to fulfill all possible requirements.

These features make the R&S®SMBV100A ideal in development applications as well as in production and service. This instrument truly does the job whatever signals with digital modulation are needed.

The R&S®SMBV100A offers excellent RF performance along with very high output level and short setting times. At the same time, the R&S®SMBV100A can be equipped with an internal baseband generator to allow generation of a number of digital standards (e.g. HSPA+, LTE, WLAN IEEE 802.11ac). The Wide frequency range from 9kHz to 6 GHz covers all of the important brands for digital modulation.

Key facts

- Internal signal generation for all major digital radio standards with optional integrated baseband source
- Fully-fledged GNSS simulator for GPS, Glonass and Galileo
- Highest output level in its class up to 6 GHz, combined with excellent RF characteristics
- Lowest cost of ownership due to outstanding price/performance ratio and on-site service capabilities
- Ideal adaptation to customer applications
