

Create e-Books from Wiki Pages

HARI OM PRAKASH

Wikipedia is an excellent free online source of information for almost everything. It is now possible to convert all the information on a subject of your interest found in Wikipedia into an e-book for

reference from time to time. Wikipedia now provides a tool called Wikipedia e-Book Creator, using which you can create e-books from Wikipedia pages of your choice in PDF (portable document format) or ODF (open document format); you can even order a print-

ed copy from Wikipedia.

How to use Wikipedia e-Book Creator

Step 1. Search with any keyword in Wikipedia. Once the page appears,

Fig. 1: 'Print/export' to expand the list

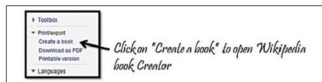

Fig. 2: 'Create a book' to open Wikipedia e-Book Creator

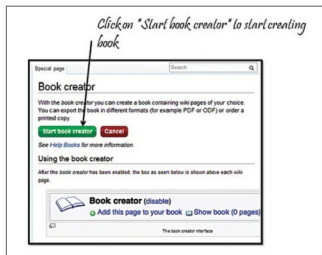

Fig. 3: 'Start book creator' to start creating e-book

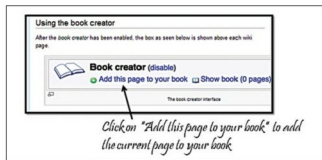

Fig. 4: 'Add this page to your book' to add the current page to your e-book

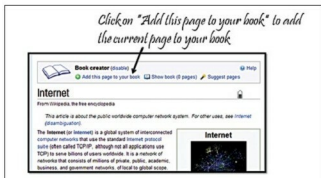

Fig. 5: 'Add this page to your book' to add the current page to your book

Fig. 6: 'Remove this page from your book' to remove the current page from your book

Fig. 7: 'Show book' to go to your book manager
