

Renesas Combines Microcontrollers and LED Driver to Offer Technological Edge and Innovations for LED Lightings

Features of LED Lighting using MCU

■ RL78/1A

- MCU built-in LED function support
- Integrates DALI protocol
- Multi-channel LED dimming/toning control
- Code generator to generate code automatically
- PWM with dithering feature
- Soft start capability
- Inter-leave PFC efficiency control
- Internal OSC (CPU:32MHz maximum)
- Clock up to 64MHz
- Operating temperature up to 125°C

Features of LED Lighting using LED Driver

■ R2A20134 for Non-Dimming

- High efficiency
- High power factor
- Competitive component count & BOM cost
- Low EMI
- Support isolated & non-isolated types of LED driver circuits

■ R2A20135 for Dimming

- Support leading/trailing edge dimmers
- Reduce flickering
- Competitive component count & BOM cost
- Low EMI
- High efficiency
- High power factor
- Support isolated & non-isolated types of LED driver circuits
