Karnataka to focus on more investment with new IT policy

The state of Karnataka is all geared up to have a new IT policy in place, which will focus on attracting more investment in the state. According to a *Business Standard* report, the policy will lay special emphasis on raising investors' interest in the Tier-II and Tier-III cities. The state government says, the new IT policy would facilitate employment of around two million people directly in Karnataka by 2020. The new policy will also aim to increase the exports from the existing ₹ 16,50,000 to ₹ 40,00,000 by 2020.

Bengal government soon to submit project report for electronics hub

By the end of December, it is expected that the Bengal government will be submitting its first detailed project report for the Naihati electronics manufacturing cluster (EMC). The government has already chosen its transaction advisers for the project and will now start scouting for anchor investor once the proposal is submitted.

Submission date for EoI for setting up semiconductor fab extended

DeiTY has extended the last date for submitting expression of interest (EoI) by semiconductor wafer fabrication (fab) manufacturers for establishing fab manufacturing facilities in India. Earlier, the last date was November 6.

Kerala plans technology innovation zone

The government of Kerala has announced its plans to establish a technology innovation zone at the KINFRA hi-tech park at Kalamassery in Kochi. The Technopark Technology Business Incubator (T-BI) society has been designated to set up and operate the innovation zone.

Walden to give \$100 mn fund for Indian semiconductor start-ups

Global venture fund Walden International has gone all out to help Indian semiconductor start-ups with a new and specialised venture fund worth ₹ 6.1 billion. Four semiconductor start-ups, based in Bengaluru and Hyderabad, have already been identified. The investment firm also has plans to back organisations in the consumer Internet space.

MP aims to reach 1200MW solar power generation capacity

Madhya Pradesh is all set to add an additional solar power generating capacity of 1200 MW to its existing capacity by June 2015. According to S.R. Mohanty, principal secretary, Madhya Pradesh government, the state had increased its solar power generation capacity from 2MW in April 2012 to 220.15MW in September 2013.

NationalChip launches new set-top box chips for Indian market

Indian market is certainly a lucrative deal for NationalChip from China that established its base in India to tap the Indian satellite TV market. A large number of CAS companies have officially authorised NationalChip for their chips with solutions. It has come up with new set-top box chips based on GX323201 for the Indian market. The chips aim at delivering better HD content.

2013 to 2018.

Driving the evolution of wireless technology is customers' increasing expectations for high-quality sound, unrestricted mobility and aesthetically appealing products. Radio frequency, Infrared, Bluetooth, SkAA, Wi-Fi are being increasingly used to stream audio.

Government probing into dumping of calculators by China

In response to the complaints received

by domestic players, India is probing into the alleged dumping of electronic calculators by Chinese companies. The investigations have been started by the Directorate General of Anti-Dumping and Allied Duties (DGAD), which is an arm of the Commerce Ministry.

According to the ET report, India has initiated as many as 159 anti-dumping investigation cases since 1992 against China, with which it had a huge trade deficit of about \$39 billion in 2012-13.

Taiwan hardware park coming up near Bengaluru

This hardware park will not only be a cluster of computer and electronic hardware units, but a first-of-its-kind integrated township for Taiwanese industries and professionals. Reportedly, the first country-specific industrial hub will be rolling out in Bengaluru soon.

The Taiwan Hardware Park will emerge in a land near Devanahalli, on the outskirts of Bengaluru. It has been allotted by the state government, and it is expected to complete in two years. This hardware park will not only be a cluster of computer and electronic hardware units, but a first-of-its-kind integrated township for Taiwanese industries and professionals from the tiny island nation, reported *New Indian Express*.

"We have already provided 300 acres for the park. About 45 companies from Taiwan are keen on setting up units here," M.N. Vidyashankar, additional chief secretary and principal secretary, the Department of Industries and Commerce, told NIE. Units that will emerge will produce electronic and computer sub-systems, components, light emitting diodes (LED) and semiconductor chips, amongst others.

Need to boost innovation and investment in electronics sector

To achieve the electronics production target of \$400 billion by 2020, the government needs to boost innovation and investment in the electronics sector urgently, admits J. Satyanarayana, secretary, department of Electronics & IT (DeiTY).

He recently said, "Investment and innovation are the two major areas that need serious attention, and which can address the challenges confronting the electronics industry in India." Satyanarayana added that lack of finance is delaying several major projects, and urged the industry to convince the banking sector, sensitise the foreign investors abroad and build their confidence in the electronics sector to get investments.
