COMPONENTS

Wet tantalum capacitor

Vishay Intertechnology has launched a wet tantalum capacitor approved as per Defense Logistics Agency (DLA) drawing 13017 for avionics and aerospace. The tantalum-cased capacitor features improved reverse voltage for higher performance, enhanced vibration and thermal shock capabilities for increased reliability.

The 13017 electrolytic capacitor is optimised for timing, filtering, energy hold-up and pulse power applications in power supplies for space and avionics equipment.

MCUs and sensors for industrial applications

Freescale Semiconductor has introduced microcontrollers (MCUs) and sensors for industrial applications. Its latest analogue offerings include system basis chips (SBCs) featuring a combination of integrated functional safety, power management efficiency and connectivity, and battery management sensor (BMS) solutions featuring precision signal measurement and ultra-low-power capabilities for mission-critical applications.

These also offer power drivers delivering exceptional thermal efficiency for high-current drive applications in brushed and brushless DC motors, as well as precision solenoid drive profiles in demanding dynamic load environments.

32-bit RX family CPU core

Renesas Electronics Corporation has announced the development of a new, high-performance 32-bit RX CPU core, the RXv2, for embedded devices in the consumer, industrial and office equipment fields.

The new RXv2 core features increased performance from 3.2 to 4.0 CoremarkRMHz or 2.0 DMIPS/MHz, with a maximum frequency of 300 MHz in 40 nm. It also features enhanced DSP and FPU capabilities.

4-Mbit FRAM chip

Fujitsu Semiconductor Pacific Asia Ltd has launched MB85R4M2T, a 4-Mbit FRAM chip with an SRAM-compatible parallel interface. It uses a 44-pin TSOP package compatible with standard low-power SRAM, so it can be a substitute for SRAM in industrial machinery, office equipment, medical devices and other equipment that currently uses SRAM.

Because it stores data persistently with no need of a battery, it contributes to hardware that is more compact, less power hungry and lower in total cost. Millennium Semiconductors, New Delhi

Low-noise amplifier

TriQuint has launched TGA2567-SM, an AIN packaged, 2-20GHz low-noise amplifier (LNA). The TGA2567-SM provides 19dBm P1dB output power with 17 dB of small-signal gain.

Greater than 16 dB of adjustable gain can be achieved by varying Vg2. Typical mid-band noise figure is 2 dB while OIP3 is specified at 29 dBm. The TGA2567-SM requires 100 mA of current from a 5V supply.

Humidity and temperature sensor

GE offers ChipCap 2-SIP, the most advanced and cost-effective humidity- and temperature-sensing solution for virtually any type of application. ChipCap 2-SIP is a single in-line package type of ChipCap with ready-installed V-Core capacitor for easy and convenient application.

Capacitive polymer sensor chip developed and fabricated in-house and CMOS-integrated circuit with EEPROM are integrated into one embedded system. Madhu Subtronic Components Pvt Ltd, Mumbai

TEST & MEASUREMENT

Switch matrix for vector network analysis

Rohde & Schwarz has developed R&S ZN-Z84 switch matrix, an up to 48-port solution for testing multiport components. The matrix can be controlled
