

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM AND LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED intensity degradation over its operating lifetime

skin on Cannon's forearm and then the chip being inserted. Also, in the video, Cannon said that he is working for a company, which manufactures devices that can be integrated with the human body. This is reportedly known as a DIY Cyborg of the merging of man and machine.

Now power your laptop while burning calories

Running out of battery power on your laptop too frequently? This might be of help to you. An American design firm known as Pedal Power, has designed a new desk, which comes with a pedal system built into it. Using the pedal system, users can generate electricity, which can then be used to charge their laptops and other devices. Plus, it gets you a bit of exercise too, doesn't it?

Pedal Power

According to reports, there are two models that have been designed by Pedal Power. The first

one is called Big Rid, while the other is Pedal Genny. The two variants are quite different from each other. While the Pedal Genny is more portable, the Big Rid fills the gap for the features that Genny does not have.

Here comes 3D-printed metal handgun

With first known 3D-printed gun getting dismissed for not offering reliable shooting experience, a new 3D-printed firearm has now arrived. This 3D metal gun is believed to fire dozens of rounds unlike its plastic predecessor.

Designed by the Texas-based 3D-printing services company, Solid Concepts, the gun is based on a laser-sintering process. Its design is based on a classic 1911 handgun and is constructed of 33 unique stainless steel and Inconel components, along with a carbon fibre-filled nylon handgrip.

The printing company boasts that the gun can handle "50 rounds of successful firing," while the company aimed for more to prove that 3D printing with metal can be successful.

A device to warn about potential heart disease

Students at IIT Madras have recently invented a budget-friendly device, which monitors the firmness of the arteries and warns about probable issues. The device is believed to avert cardio-vascular diseases which are on the rise due to unhealthy lifestyle, stress and bad-eating habits.

Dubbed as ARTSENS, the device is an abbreviation of Arterial Stiffness Evaluation for Non-Invasive Screening). ARTSENS makes use of an ultrasound probe by rebounding high-frequency ultrasound waves into the human body. The echo of the waves is thus caught by the receiver and examined to resolve the total elasticity of the vessels that carry blood.

The project is headed by Dr Jayaraj Joseph at IIT Madras' Healthcare Technology Innovation Center (HTIC). As per Dr
