Get scents instead of notification rings

Here is an innovation you did not expect! A new device, known as Scentee, uses smell to notify you about alerts on your smartphone. According to reports, the device connects to the smartphone through the earphone jack and instead of receiving alert sounds, it emits smells like mint when you get a notification, message, etc.

World's first character-based battery back-up charger

Mimoco is in the process of creating some unique mobile accessories. Claimed to be first-of-its-kind, the company has created MimoPower BatteryBot, which is a character-based rechargeable backup battery for smartphones, tablets and mobile devices.

Car Mode to stop texting while driving

The Car Mode that comes with the iOS 7 operating system, recently launched by Apple, is apparently designed to stop people from texting while driving. According to a report by Mashable, the Car Mode is activated by connecting the phone to a vehicle's Bluetooth system.

Joseph, there are numerous factors such as age and lifestyle that have an effect on blood vessels and thus affecting heart or brain. With ARTSENS, it is possible to identify premature vascular events and avert heart diseases by adopting an early treatment.

The device is low priced and simple to use. Though there exist gadgets that can gauge the elasticity levels of arteries, but it is difficult to use them.

Now make texts and calls from aircraft

Many find it hard to get over the 'no connection with the outside world' scenario when they are airborne. Well, Gogo, the company providing in-flight Internet services is looking to solve this problem through its newest technology. According to a CNET report, the company has developed the Text & Talk technology. The company reportedly showed the technology to CNET on board a flight from New Jersey's Newark International Airport.

According to the CNET report, the technology makes use of an aircraft's wireless network in order to route calls and text messages to people on the airplane and off it. The company has reportedly created an app, which allows users to send and receive text messages instantly. The app though is currently in beta development stage. Voice calls on the other hand depend on the Wi-Fi network's strength.

Further, with Gogo's services, users need to download an app, which allows them to connect to the in-flight Wi-Fi network, just like they would be connected to a cellular network. Tony LaMarca, Gogo's product manager, told CNET, "We tried to find something that worked, but there was nothing that was quite exactly what end users wanted. We looked at a number of solutions and started from scratch."

BINAY PowerLED
 Inspection Hand Lamp

BOX Design

LINEAR Design

BINAY PowerLED Inspection Hand Lamps utilize a light source comprised of multiple high power white LEDs

- Very low power consumption of 10 watts or less
- Long life (over 50,000 burning hours), covered under 3-year warranty
- Unbreakable shock-proof and vibration-resistant construction; cool light output with no heat radiation
- Glare-free light output, focusing only on the work area

Binay Opto Electronics Pvt. Ltd.
 44, Armenian Street, Kolkata 700 001, India
 Telephone: (033) 4006 9875, 2210 3807, 2210 2039
 email : info@binayled.com
 Fax : 91-33- 2242 1493 <http://www.binayled.com>

INVENTING NEW TECHNIQUES OF PRODUCING LIGHT

BINAY PowerLED-based
 Industrial WELL GLASS Luminaires

BINAY's PowerLED Well Glass luminaires replace Conventional HPSV and HPMV well glass fittings

- 65%-70% LOWER power consumption over HPSV or HPMV
- Life of 10 to 15 years - requires no replacement once fitted
- FIVE-YEAR warranty
- Instant turn-on to full brightness
- Full-spectrum white light provides greater clarity and visual acuity; improves visibility and safety
- Optimized thermal management design for long life of LEDs
- Constant light output over 100V-260V operation
- Eco-friendly; eliminates hazardous disposal costs
