

Embedded Systems

Embedded systems are common in devices that we use in our daily life. They are mostly found in consumer, industrial, automotive, medical, commercial and military applications. These systems have a variety of applications and use. Here are some of the online resources that will help you understand them better

sparkfun.com

sparkfun is an online retail store that sells the bits and pieces to make your electronics projects possible. Whether it is a robot that can cook your breakfast or a GPS cat-tracking device, the products and resources are designed to make the world of electronics more accessible to an average person. In addition to products, sparkfun also offers classes and a number of online tutorials designed to help educate individuals in the wonderful world of embedded electronics.

altera.com

Altera has developed tutorials and laboratory exercises for use with the DE-series boards. The laboratory material is targeted for use in a typical course on embedded systems, which is included in many computers and electrical engineering and computer science programs. Altera's DE-series boards provide an excellent platform for laboratory exercises associated with courses on embedded systems. These systems have been designed specifically for educational purposes.

freeRTOS.org

freeRTOS is a market leading RTOS from Real Time Engineers Ltd that supports 31 architectures and receives 77,500 downloads a year. It is professionally developed, strictly quality controlled, robust, supported and free to embed in commercial products without any requirement to expose your proprietary source code. The website is a good resource for anyone who is interested in RTOS. It also includes easy-to-use pre-configured projects and a free forum support.

EmbeddedRelated.com

EmbeddedRelated.com has been around since 2005 and over the years has become a very popular resource for embedded systems engineers around the world. The information on the site is very well organised into different categories. It has a blog, a tutorial and a forum where you can access several active embedded systems-related discussion groups. It allows embedded systems engineers and researchers to exchange information and ideas amongst themselves.

Intel Embedded

The site has everything that one needs to learn about Intel's embedded offerings. It has a dedicated section containing videos, white papers and training on embedded systems. There are also many other resources available on the site that are related to Intel's embedded hardware and software. It has a link to Intel Embedded community where one can discuss different issues related to design and application. What else do you need?
