

ASK Communication Trainer

JITENDRA JANGID

Amplitude shift keying (ASK) is a form of amplitude modulation that represents digital data as variations in the amplitude of

a carrier wave. Fig. 1 depicts the ASK modulation technique for digital communication.

Presented here is a simple circuit that can be used to demonstrate the phenomenon of digital communication

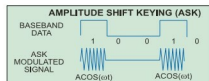

Fig. 1: Digital input data and output ASK signal from a transmitter

Test Points

Test point	Details
Across TP0	0V, GND
Across TP1	+10V
Across TP2	-10V

using ASK modulation technique. The trainer has both modulator and demodulator sections that can be quickly built with easily-available components. Fig. 2 shows the simulation results for the circuit prepared by the author.

Circuit and working

The circuit for ASK communication trainer is shown in Fig. 3, which is built around transistor 2N2222 (T1), operational amplifier 741 (IC1) and a
