Hitachi to invest ₹ 47 billion more in India by 2016

Hitachi says that it will be investing another ₹ 47 billion in India by the year 2016. This additional investment will be made for expanding capacities across business verticals. These include construction machinery, information technology (IT) services, transport and power equipment. The company announced that this is part of a bigger strategy to expand its global footprint. This expansion is part of the plan to triple the sales of Hitachi India Ltd to ₹ 200 billion and to raise local headcount by 5600 over the period.

Solar installations in India to fall again in 2014: Report

Owing to both national and state-wide PV incentive programs, there are forecasts that suggest that solar installations are expected to fall in 2014 as well. India has planned to install 750MW of PV capacity. "It is worst showing since 2011, as critical state-wide policies fail to live up to their promise," states market researcher, Bridge to India. In 2013, India has installed 905MW PV capacity, which is 9 per cent lower than the performance data of 2012 when it was recorded as 982MW.

RS Components does hat trick of high scores of downloads

RS Components, a leading high service distributor of electronics and maintenance products, has achieved a series of major milestones in user download figures for three of the company's popular free online design resources. These are accessible via the RS website and from DesignSpark.com, the online resource hub for the engineering community. The 3D CAD model programme has attained the highest download figure for a single online resource available from RS, with a total of more than 500,000 model downloads from the RS website since the programme's launch in 2010.

ment has expressed its objection to extend the deadline for the third time.

World's biggest integrated VRLA plant to come up at Chittoor

Amara Raja Batteries Limited group that belongs to the Galla family has extended its business base by launching the world's largest integrated medium VRLA plant at Nunegundlapalli near Chittoor on Sunday. The first factory set up in the 500 acres of land, was set

up with an outlay of ₹ 3500 million and was inaugurated recently. The plant has an employment generation capacity of 1500 and can manufacture 3.5 million UPS batteries each year as per ARBL managing director, Galla Ramachandra Naidu.

As stated on newindianexpress.com, he stressed that "The second plant is under construction and two more plants, one for tubular and the other for plastic, will soon commence

operations. The second unit, with an outlay of ₹ 3500 million, would provide jobs to another 1500 people."

Videocon gears up to set up a new manufacturing unit

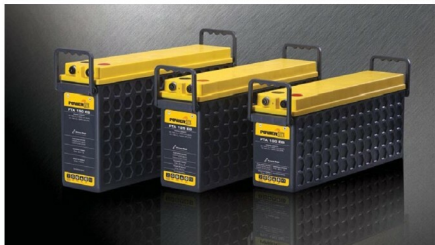

A new manufacturing unit by Videocon Industries will produce one million products in a year. Officials have confirmed that the manufacturing unit will be founded in Punjab or in Madhya Pradesh. This new opening of the manufacturing unit armed with the latest technical equipment will increase the production of set-top-boxes.

Recently, the DTH section of Videocon has been getting more attention in the market. In the 2013-14 budget, the Finance Minister has increased the level of import duty from 5 per cent to 10 per cent. In October 2013, the organisation experienced a hike in the STB market.

India's used goods market growing fast

The options of retrofitting and re-use are being considered more actively than ever before, whether it be consumer goods like electronics, durables or automobiles or the industrial machinery in the capital goods sector, says a new study by the Associated Chambers of Commerce and Industry of India (ASSOCHAM). High interest rates, risk aversion and subdued investment appetite have led to this state of 'second-hand culture' so much so that India's used goods market is likely to touch ₹ 1,150,000 million by 2015 from ₹ 8,00,000 million at present. The findings are the result of growing consumerism and disposable income.

The rise in income today is not commensurate to the rise in aspirations, leading consumers to buy products from the second-hand market to fill the gap, the study says. Nearly 45 per cent of the respondents covered in the study say buying second-hand goods from reliable platforms is worthwhile as demand has multiplied but income has not risen accordingly.
