TOOLS & EQUIPMENT

Thermaltronics hand soldering system

Power2U Technology, India introduces TMT9000S thermaltronics hand soldering systems. Designed in Australia for lead-free/leaded soldering, they require no calibration. Using

Curie heat technology and induction heating, they rapidly transfer heat to soldering tips. Low idle power and energy-saving feature of TMT series must be considered when upgrading or replacing your existing soldering irons. TMT systems are ideal for electronic PCB assembly, and SMT rework, and offer longer tip life and increased productivity.

Bench-top soldering solutions

Easy-to-operate equipment with low operational costs are the dream of any engineer. That is exactly where PCB Power's new SMD reflow oven and SMD solder paste stencil printer comes to help. The bench-top SMD reflow oven can have unlimited user-defined soldering profiles, with a simple reflow-pilot PC software that comes with it. The microprocessor control on the oven stores up to five profiles, and features a separate temperature on the

PCB to simulate live profile simulations. It can also handle both leaded and unleaded solder, which is heated through Quartz IR and ducted forced hot air.

On the other hand, the SMD solder past stencil printer is an economical printer that is still sufficiently fast and precise. It uses inexpensive laser-cut stainless-steel stencils and features excellent registration repeatability. It does not require clamping holes that are needed to support the stencil. Both machines can handle a maximum PCB size of 350x250mm.

LEDs & LED LIGHTING

Energy saving LED bulbs

Grace Electrotek introduces GraceLife LED bulbs that provide high efficiency of up to 90 per cent, which is higher than that of traditional bulbs and CFL. It is designed for residential and commercial usage. Its working life is up to 45,000 hours (depending on the condition of use). Since LEDs do not emit any infrared or ultraviolet light, they do not attract insects. This product is the substitute of 9W CFL.

PowerLED downlighter

The Binay model 70-CDM PowerLED downlighter is designed as a practical light-equivalent replacement for replacing a 70-watt CDMT (ceramic

discharge metal-halide lamp) fitting, which is widely used in retail and hospitality industries, apart from other sectors. With a system power consumption of around 30-35W, this product has less than half the power consumption of the CDMT lamp

(which has a total system wattage of around 80-85 watts with the ballast). The high colour rendering index of 85 (typical) provides good rendition of colours (particularly important in retail applications). It offers long life, with a warranty of five years, instant start-on to full brightness and no infrared or radiated heat output.

UFL-user-friendly lights

Modern Solar Technologies (India) has launched a new series of LED-based bulbs and lighting solutions called UFL-user-friendly lights. These are

chip LED-based 3W-5W-7W bulbs having a metallic body and shell design that serve as a heat-sink and diffuser
