

So if you are looking to buy something latest, Android Jelly Bean smartphones could be a great choice. We take you through the features that you should look for whilst buying one:

Processor. Nowadays, people pay for the experience they get with the device. Processors play an important role in delivering that experience. There is a wide array of Android smartphones available currently running on dual-core, quad-core and octa-core processors in mid-to-high price range. So you can choose one as per your budget.

Display. The Android Jelly Bean User Interface (UI) framework supports a variety of screen sizes and 12.7cm (5-inch) screens are the most popular. However, you can easily go a notch higher or lower in terms of the screen size, but a decent resolution is a must for you to get the real 'Android' and 'smartphone' experience. The resolution basically depends on the screen

size of a device. Official Android Jelly Bean document reports, screen size 'normal' must be at least 480dp×320dp. 'Large' screen size must be at least 640dp×480dp, whilst 'xlarge' screen size must be at least 960dp×720dp. The aspect ratio of the Android Jelly Bean smartphones should be between 4:3 and 16:9.

Memory. The bigger memory your smartphone has, the better are the possibilities for you to multitask on your device. Memory size of a smartphone should be directly proportional to the processor packed in it. If you have a device with a powerful processor, you should have decent RAM to support it, else device lag issues may take away the fun of it. A 512MB RAM with dual-core processor is considered decent for performing day-to-day tasks.

Internal storage. Whilst you should note the internal storage capacity of a device, knowing whether it is expandable
