

to increase production rate of voltage stabilisers. It is used to control the output voltage by varying the input voltage. It is a multi-featured instrument and has multi-parameter class 1 digital panel meter with display of input voltage, output voltage and output current. It is also available with manual mode for field testing.

SOLAR

MPPT solar charge controller

Systellar Innovations has launched CC-MPPT-1224-20 and CC-MPPT-48-20 MPPT-based charge controllers to cater to Indian solar market. The product has been indigenously designed and developed in company's own R&D

lab and provides excellent performance at affordable pricing. It comes with MPPT algorithm that offers up to 25 per cent more power from same PV panels. It has an LCD

display to show battery, PV panel and DC load status. It is capable of charging even a deep discharged battery and comes with a 2-year product warranty.

HARDWARE

K82 mechanical crimping tool

This mechanical crimping tool has been engineered for insulated cable connections from 0.5-6mm². The mechanical lever system has been optimised in this tool leading to approximately 33 per cent less force required than usual. It weighs around 530gm and is 23mm thick. Force at 6mm insulated crimp material is approximately

160N. It has a three-component handle with an additional non-slip coating for better handling on work surfaces. It offers easy handling, thanks to reduced opening width of tool, and it can be

used for double crimping, i.e., crimping of conductor and insulation in one easy step.

COMPONENTS

650V green mode buck switches

Fairchild Semiconductor has developed the FSL306 and FSL336 650V green mode AC buck switches. These devices offer burst-mode operation with the low available operating current (250µA) that helps to reduce standby mode power consumption for increased energy efficiency. Power scalability from 0.5W to 3W

(FSL306) through the adjustable current limit pin helps simplify designs and reduce design time. These switches provide reliability through rich protection features, such as a safe auto restart mode. After a fault condition, the switch waits 650 milliseconds before restarting. This feature reduces the stress on the system during a long-term fault, improving system reliability.

Compact, surge-tolerant fuses

Littelfuse, Inc., global leader in circuit protection, has introduced two series of compact, high-surge tolerant fuses capable of withstanding up to 20 lightning-induced high-current surges without performance degradation. The

328 and 688 series fuses offer protection superior to that of circuit breakers, providing short-circuit and overload protection, ensuring long-term reliability for outdoor applications that operate at high-surge exposure levels.

EMBEDDED

ThunderBench for ARM Cortex

Uchi Embedded Solutions, Bangalore has partnered with Emprog Inc., USA to sell and support ThunderBench IDE for Cortex/ARM in India. ThunderBench for ARM Cortex is the most comprehensive and best integration of a C/C++ compiler, debugger and IDE within the Eclipse platform for any ARM Cortex device. The integration and the crafting of Eclipse made by Emprog in its ThunderBench have addressed the gap between what used to be called 'proprietary' and 'open technology.' The company is offering special pricing for startups, R&D designs and projects in prototyping phase.
