

True low power LCD MCUs with sub μ A display driver! Scalable for various LCD applications for healthcare, appliances, meters and more

RL78/L1C and RL78/L13 Group microcontrollers, members of the renowned 16-bit RL78 family, feature LCD panel drivers with ultra-low consumption LCD circuits. This makes them ideal for LCD display functions in home appliances (IH rice cookers, microwave ovens, water heaters, etc.), healthcare devices (sphygmomanometers, body fat scales, pedometers, etc.), measuring equipment and other products requiring high energy efficiency

Key Features

- High-precision ($\pm 1\%$) on-chip oscillator enables 24 MHz CPU operation
- Ultra-low consumption LCD circuit
- Support for three methods of generating LCD drive voltage (internal voltage boost, capacitor split, external resistance division)
- Support for 18-step LCD contrast adjustment
- Support for LCD blinking

Group Line-up

RL78/L1C main features

- Support up to 416 LCD segments, (44 to 56 seg X 4 com or 40 to 52 seg x 8 com)
- 12-bit ADC / 8-bit DAC
- USB 2.0 function
- Battery charging 1.2 support
- Packages: 80 an 100-pin packages

RL78/L13 main features

- Support for up to 240 LCD segments (51 seg x 4 com or 47 seg x 8 com)
- ROM capacities: 16 to 128 KB
- Packages: 64 and 80-pin packages

Starter Kit RL78/L13
