

Samsung Develops World's First 1TB SSD of Smallest Size

1TB mSATA SSD is reportedly 60 per cent smaller than other devices of this calibre

Enough about Samsung smartphones, the company does other things too! The world's leading smartphone maker has reportedly launched the first 1TB mSATA SSD recently. Whilst SSDs of this calibre are not new, Samsung has reportedly been able to reduce the size by about 60 per cent from what is found otherwise. The SSD is known as the Samsung 840 EVO lineup.

The drive can take 90,000 random outputs and 98,000 random inputs per second. According to reports, the drives can offer read speeds of 540 Mbps and write speeds of 520 Mbps. Moreover, the 128GB NAND Flash memory is being used in the drive, which is based on the 10-nanometer class process technology. Four such memory chips put together form a one TB of storage space. In this, each pack holds a total of 16 layers of 128GB chips. The drive is only 3.85mm thick and weighs only 8.5 gm.

Pulse Electronics' Ultra-Thin NFC Antenna for Mobile Devices

The antenna enables NFC connectivity to mobile devices for sharing payments, credential storage and exchange, accessing and controlling data and wirelessly connecting to tags

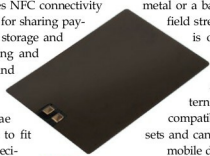

Pulse Electronics Corporation has introduced an ultra-thin near-field communications (NFC) ferrite sheet antenna. It enables NFC connectivity to mobile devices for sharing payments, credential storage and exchange, accessing and controlling data and wirelessly connecting to tags.

NFC antennae are custom-made to fit the mechanical specifications of a variety of mobile devices.

The antennae are 35mm×50mm×0.133mm in size and operate at a frequency of 13.56MHz. The contacts are side-by-side in the antenna area for easier implementation and to fit

more compactly. The pad size is 2mm×2mm. The antenna's operation is not affected by close proximity to metal or a battery. The magnetic field strength of the antenna is optimised by ferrite material type and thickness selection and the radiator pattern. The antennae are compatible with several chipsets and can be used for several mobile devices like handsets, phablets and tablets.

Pulse's new NFC antenna is not only thinner than previous NFC antennae without losing performance, but its side-by-side configuration makes it easier for mobile device manufacturers.

Android Jelly Bean Powered 'Bharat Phone' Smartphone

The Bharat Phone is the first sub ₹ 2000 smartphone to offer Internet access

BSNL and Pantel Technologies Private Limited (PTPL) have launched Bharat Phone PF300 and Penta Smart models—PS501 and PS650—and Penta T-Pad WS707C, respectively.

The Bharat Phone is priced at a mere ₹ 1799 and has a large screen and the proprietary Java-based operating system. In addition, the device comes pre-bundled with 1200 minutes of voice plan from BSNL, which includes 100 minutes of free talk time every month for 12 months.

HomeShop18 is the launch retail partner for PS650 and WS707C range of Penta smart devices. The Penta Bharat Phone PF300 is the first sub-₹ 2000 phone that provides Internet access. The PentaSmart PS650, on the

other hand, comes at a price of ₹ 7999 and has a 16.5cm (6.5-inch) screen and has 3G capabilities. It is the first phone to be priced below ₹ 10,000. It is an Android 4.2 Jelly Bean-powered smartphone, which runs on a 1.2GHz dual core processor.

The Penta Smart PS501 is priced at ₹ 6999 has a 12.7cm (5inch) IPS display. It comes with 3 GB of 3G data and 300 minutes of free talk time with the BSNL connection. Finally, the Penta T-Pad WS707C is a budget tablet device, which is also priced at ₹ 6999. It comes with a dual core processor and runs the Android 4.2.2 Jelly Bean operating system.

Price: ₹ 1799 to ₹ 7999
