

Develop strong domestic manufacturing base in electronics and telecom: PM

There have been talks about boosting domestic electronics and telecommunications industry in India. Whilst policies are being put in place and genuine efforts are being made, but how much will it actually help is yet to be seen. Talking on the same lines, Prime Minister Manmohan Singh said that in order to avoid huge import bills, it is imperative that the country develops a strong domestic manufacturing base in electronics and telecommunications.

Speaking at the India Telecom 2013 event organised by FICCI and the Department of Telecommunications in New Delhi, he said, "I would like to take today's opportunity to repeat a point that I made last year. India needs to develop a strong domestic manufacturing base in electronics and telecommunications. It is estimated that by 2020, India will be importing electronics products worth \$300 billion, which will be more than the value of our oil imports."

American firms should invest in Indian manufacturing: Sibal

In order to reduce India's dependency on imports in areas like electronics good, it is important that American companies invest in the country's manufacturing sector instead of selling aircraft and defence equipment to India. This concern was shared by telecom minister, Kapil Sibal.

Speaking at a summit organised by the Indo-American Chamber of Commerce, Sibal said, "They (US-based investors) are interested in selling their Boeings, they are interested in selling aircraft, defence equipment but that is not the way to converge in this partnership. I am sorry I am being very frank but it is the time to be frank." "Today, because of high wages cost in China,
